QUESTION 1

Which of these statements is NOT true?

A. NLS can only process multi-byte characters.

B. NLS supports various languages and countries.

C. You can process Japanese data in an English version of QualityStage.

D. When installing a non-English language version of QualityStage, NLS is enabled automatically.

Correct Answer: B

QUESTION 2

Which data type(s) will NOT be supported by Standardization?

A. Binary.

B. Integer.

C. Non-vector data types.

D. Non-aggregate data types.

Correct Answer: A

QUESTION 3

A major international financial firm has clients in over 35 countries, including the U.S. and Japan. A requirement exists to standardize all addresses and validate the U.S. and Japanese physical addresses.

How can this be accomplished?

A. Use AVI to process all addresses within the single source.

B. Use USAC to certify the U.S. addresses, AVI for the Japan addresses and custom rule sets for the remaining countries.

C. Filter all the records by country. Use AVI for the U.S. and Japan and domain-specific rule sets for the remaining countries.

D. Filter U.S., Japan and remaining countries into individual files. Process the U.S. and Japan addresses through AVI and use MNS for the remaining countries.

Correct Answer: A

QUESTION 4

What two rule groups are needed for rule sets?

A. A rule group for rules that you want to apply to split a domain.

B. A rule group for rules that you want to apply to records after all other actions.

C. A rule group for rules that you want to apply to records before all other actions.

D. A rule group for rules that you want to apply to records as they read a lookup table.

E. A rule group for rules that you want to apply copies of records before all other actions.

Correct Answer: CD

QUESTION 5

If a token had the value 13D and the "D" had to be isolated in a variable named Temp, what Pattern Action code would be used?

A. COPY [1] Temp

B. COPY [1](c) Temp

C. COPY [1](-n) Temp

D. COPY [1](-c) Temp

Correct Answer: A
