QUESTION 1

What is configured to enforce the blocklist permissions and deny access to clients in the blocklist to protect against a lost or stolen device obtaining access to the network?

A. My Devices portal

B. blocklist portal

C. Authentication rule

D. Authorization rule

Correct Answer: D

QUESTION 2

A network engineer is attempting to terminate and reinitialize wireless user sessions individually by using the Live Sessions tab in Cisco ISE. Cisco ISE and the Cisco WLC are separated by a firewall. Which port must be allowed on the firewall so that the network engineer can perform this function from Cisco ISE?

A. TCP port 8443

B. UDP port 5246

C. UDP port 1700

D. TCP port 3791

Correct Answer: A

Explanation:

TCP port 8443 is the default port used for the HTTPS-based communication between Cisco ISE and Cisco WLC. It is used for secure web-based management and configuration tasks, including provisioning and monitoring.

QUESTION 3

An administrator is configuring RADIUS on a Cisco switch with a key set to Cisc403012128 but is receiving the error "Authentication failed: 22040 Wrong password or invalid shared secret. " What must be done to address this issue?

A. Add the network device as a NAD inside Cisco ISE using the existing key.

B. Configure the key on the Cisco ISE instead of the Cisco switch.

C. Use a key that is between eight and ten characters.

D. Validate that the key is correct on both the Cisco switch as well as Cisco ISE.

Correct Answer: D

QUESTION 4

What is a characteristic of the UDP protocol?

A. UDP can detect when a server is down.

B. UDP offers best-effort delivery

C. UDP can detect when a server is slow

D. UDP offers information about a non-existent server

Correct Answer: B

https://www.cisco.com/c/en/us/support/docs/security-vpn/remote-authentication-dial-user-service-radius/13838-10.html

QUESTION 5

A Cisco ISE administrator is setting up Central Web Authentication to be used for user endpoint authentication. The client cannot reach the guest portal to log in and gain access, but DNS is functioning properly and the guest portal is enabled. What else must be configured to gain access?

A. Allow port TCP/8443 on the firewall.

B. Configure HTTP to HTTPS redirection.

C. Configure the guest portal to listen on TCP/8443.

D. Allow redirection from any client IP range.

Correct Answer: B

Explanation:

HTTP to HTTPS redirection ensures that when a client attempts to access the guest portal using HTTP (port 80), they are automatically redirected to the secure HTTPS (port 443) version of the portal. This redirection helps enforce secure

communication and prevents users from accessing the portal over an unencrypted connection.
