QUESTION 1

During a recent network outage, the failover to the secondary DNS server was taking too long. The administrator found the RES_RETRY and RES_TIMEOUT values needed to be updated. Where are these values updated?

A. /etc/inetd.conf

B. /etc/rc.net

C. /etc/security/limits

D. /etc/environment

Correct Answer: D

QUESTION 2

Which command can an administrator use to discover the port VLAN for ent3?

A. entstat –d ent3

B. lsvlan –I ent3

C. ifconfig ent3

D. netstat –ad

Correct Answer: B

QUESTION 3

A host has a single virtual Ethernet adapter (ent0) configured with only a default PVID, and the administrator is trying to determine why it cannot be used to reach any other system on the network.He suspects that it may be caused by a problem in the VLAN configuration.

How would the administrator determine the VLAN for which the adapter was configured?

A. Use the command \\'lsdev -I ent0\\' on the host to determine the port VLAN ID.

B. Use the command \\'lsattr-EI ent0\\' on the host to determine the port VLAN ID.

C. Look on the HMC to determine which VLAN is configured for the adapter.

D. Examine the Shared Ethernet Adapter on the Virtual I/O Server to determine which VLAN the adapter is using.

Correct Answer: C

QUESTION 4

New change control procedures dictate that system maintenance windows be shown to each user after logging into the system using sshor telnet. Updating which file or files will accomplish this task?

A. The message of the day file

B. The user default attributes file

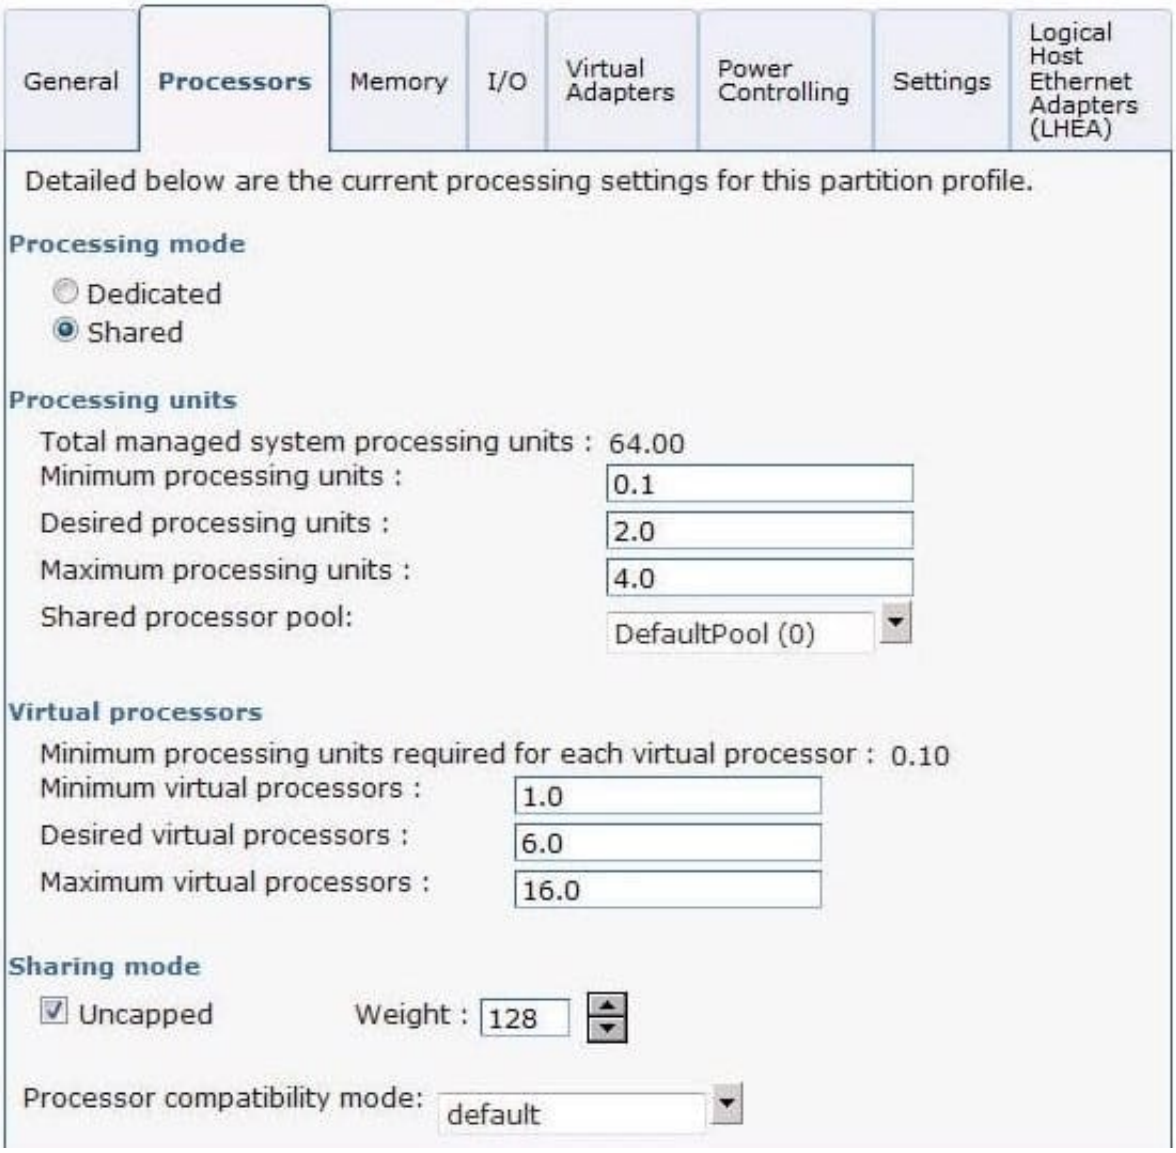
C. User and admin system alert files

D. The var daily message files

Correct Answer: A

QUESTION 5

In the graphic below, the LPAR\\'s current physical and virtual processor allocation matches its desired settings How do these settings limit system processor assignment for the LPAR?



A. The LPAR can increase to 16.00 processing units of capacity in the shared processing pool as needed.

B. The LPAR will be able to use a maximum of 6.0 processing units of capacity in the shared processing pool.

C. The LPAR will be able to use a maximum of 4.0 processing units of capacity in the shared processing pool.

D. The administrator will be allowed to add a maximum of 4.0 additional processing units to the LPAR using DLPAR, making its allocation 6.0 processing units.

Correct Answer: B
