QUESTION 1

You have been asked to review the IoT migration plans for a manufacturing plant. Which technology should take priority?

- A. Ethernet Switches
- B. Wi-Fi Infrastructure
- C. Sensors
- D. Security
- E. Applications

Correct Answer: B

QUESTION 2

Which statement about updating the service profile is true?

- A. Updating service profile templates can have vNIC and vHBA templates that are initial templates.
- B. Updating service profile templates cannot have vNIC and vHBA templates that are Initialtemplates
- C. Changes made to a vNIC templat that is an Updating template are not propagated to the service profile if the service profile template is Initial.
- D. Updating service profile templates can only be applied to an existing service profile.
- E. Changes made to a vNIC template that is an Initial template are propagated to the service profile if the service profile template is Updating.

Correct Answer: A

QUESTION 3

Drag and drop the enlisted four offers from the left onto the correct Cisco ONE Enterprise Cloud Suite on the right.

Select and Place:

full data center automation across computing, network, storage, and virtualization layers

single-profile modeling and deployment of applications

unified portal of IT and no-IT based services deployed to a data center

single-click deployment and monitoring of Hadoop and Splunk clusters

cloud management

service management

big data automation

infrastructure automation

Correct Answer:

single-profile modeling and deployment of applications

unified portal of IT and no-IT based services deployed to a data center

single-click deployment and monitoring of Hadoop and Splunk clusters

full data center automation across computing, network, storage, and virtualization layers

QUESTION 4

Which definition of Intelligent Service Card Manager is true?

- A. management software to manage provisioning of RISE services on a Cisco Nexus switch
- B. part of the RISE service that is responsible for establishing initial connectivity with remote appliance (for example, Citrix NetScaler)
- C. part of the RISE service that resides on a Cisco Nexus switch that is responsible for handling tasks related to receiving Route Health Injection messages from appliance and programming those routes in the universal routing information base
- D. part of the RISE service that resides on an appliance (for example, Citrix Netscaler) that is responsible for sending Route Health Injection

E. management software to manage Cisco Nexus devices

Correct Answer: C

QUESTION 5

Which three main functions are provided by OTV to achieve failure isolation? (Choose three.)

- A. optimal outbound routing
- B. unknown Unicast traffic suppression
- C. ARP optimization
- D. use of multiple OTV overlays
- E. Spanning Tree isolation
- F. unicast policy control

Correct Answer: BCE

QUESTION 6

Which two statements about the physical leaf interface configuration are true? (Choose two.)

- A. When not configured, the default AEP information displayed on an interface defaults to the system-defined AEP.
- B. A port connected to an APIC has usage type of EPG, Infra, and Controller.
- C. The administrative port layer state can be Switched, Routed, or P2P.
- D. Auto MdiX mode detects the cable connection type and configures the connection appropriately.
- E. The port usage type is "Blacklist" by default.

Correct Answer: AD

QUESTION 7

Which description of how to enable DIMM Blacklisting is true?

- A. Configure a memory policy in the equipment > policy subtab.
- B. Enable blacklisting in the servers > policy subtab.
- C. Configure a memory policy under the services tab.
- D. Enable blacklisting in the servers inventory > memory subtab.

Correct Answer: B

QUESTION 8

Which two statements about OpenStack are true? (Choose two.)

- A. Trove is the GUI web application that is used to control and configure different OpenStack components.
- B. Keystone is the networking component that is used to create and manage network resources.
- C. Nova is the compute component that is used to manage and automate the provisioning of compute resources.
- D. Horizon is the component that is used for IP address management.
- E. Neutron is the networking component that is used to create and manage network resources.

Correct Answer: AE

QUESTION 9

In which EPG is the consumer interface of an L4-L7 device placed?

- A. consumer EPG
- B. shadow consumer EPG
- C. shadow provider EPG
- D. provider EPG

Correct Answer: B

QUESTION 10

How does FabricPath build loop-free topologies for multidestination traffic?

- A. FabricPath uses forwarding tags to ensure a loop-free topology.
- B. FabricPath uses multicast groups to encapsulate Ethernet traffic in IP multicast packet.
- C. FabricPath cannot have loops and does not need to rely on any logic to prevent them.
- D. FabricPath uses spanning-tree inside the FabricPath network to prevent loops.

Correct Answer: A

QUESTION 11

Which two actions must occur for an APIC to be discovered successfully into a new ACI fabric? (Choose two.)

- A. The fabric controller target size must be equal to or greater than the number of APICs.

- B. A BIOS password must be set.
- C. LLDP must be enabled on the virtual interface card of the APIC.
- D. The controller must be discovered automatically.
- E. LLDP must be disabled on the virtual interface card of the APIC.

Correct Answer: AC

QUESTION 12

Which option is a commonly used network layer protocol in an IoT environment?

- A. XMPP
- B. AQMP
- C. CoAP
- D. RPL
- E. MQTT

Correct Answer: C
