QUESTION 1

When would extending the XSL processor be MOST appropriate?

- A. To access system services that are not available in XPath or XSL
- B. To avoid the "no side effects" rule in XSLT, e.g., to update a counter
- C. To allow direct interaction with the xsl:template actions by the application
- D. To perform complex calculations that are cumbersome to express in XSLT or that would seriously degrade performance

Correct Answer: AD

QUESTION 2

Refer to the exhibit to answer the question.

The Web site for a financial services company will include both web-based trading (e-trades) and the financial research reports to help investors make their decisions. As part of the application architecture, note the following:

*

As the data interchange format between the web-based application and the company's legacy trading systems.

*

As the EFT (Electronic Funds Transfer) data interchange format with the customer's bank, from which funds will be withdrawn to settle the trade.

*

As the source format for the financial research reports, which will be searchable and displayable from the web browser.

*

The set of banks is unknown at the time the application is being built.

It is very important to management that the Web site looks professional, that customers have pleasant interaction, and that the site has performance characteristics. Additionally, management wants to ensure that financial reports can still be produced on paper with high-quality typesetting and four-color printing.

Which of the following is MOST likely to be required in the design?

- A. XML from the bank must be validated and transformed into a format expected by the legacy system.
- B. XML from the legacy system must be transformed into a format expected by the bank's application.
- C. The DTD for financial reports must be consistent with element names used by the bank.
- D. The DTD for EFT transactions must be consistent with element names used by the browser.

Correct Answer: A

QUESTION 3

A GUI Editor for editing XML documents is being built. It has a view where the XML document can be presented in a tree form. One of the requirements is that a user should be able to visually select one or more nodes, and cut and paste them into another destination node. A parser that conforms to the DOM API implementation is used for XML processing. Which of the following types provided by the DOM API can be BEST used to temporarily store the nodes that have been cut and later to append them to the destination node?

- A. Document
- B. DocumentFragment
- C. NodeList
- D. NodeMap

Correct Answer: B

QUESTION 4

How should an XML developer store binary data which has been encoded (as base64) as the content of an element "image" in an XML document?

- A. ...Binary data encoded as character data...]]>
- B. ...Binary data encoded as character data...
- C.
- D.
- E. Binary data cannot be stored.

Correct Answer: C

QUESTION 5

The difference between XML Schema simple type and complex type is:

- A. Only the predefined XML Schema types such as string and date are considered to be simple types.
- B. A simple type is used only for defining attributes.
- C. A complex type is used only for defining elements.
- D. A pattern facet can only be associated with simple types.
- E. Only complex types can have attributes.

F. Only simple types can have attributes.

Correct Answer: E
