### QUESTION 1

A system administrator is asked to write a PERL script to output only those error messages in System Out log that refer to some sort of error or warning. Which event types should the system administrator include?

- A. F,E,W
- B. F,E,W,D
- C. F,E,W,A
- D. F,E,W,H

Correct Answer: A

---

### QUESTION 2

A customer called a WebSphere support analyst and asked about J2EE extensions. The analyst said that these extensions are included with Programming Model Extension (PME) which is part of WebSphere Application Server V6. The analyst also mentioned of the included extensions, but made a mistake on one of the extensions. All of the following are correct EXCEPT:

- A. Asynchronous beans offer performance enhancements for resource-intensive tasks by enabling single tasks to run as multiple tasks.
- B. Startup beans allow the automatic execution of business logic when the node agent starts or stops.
- C. Internationalization service is a WebSphere extension that allows one to automatically recognize the time zone and locale information of a calling client.
- D. Scheduler service is a WebSphere programming extension responsible for starting actions at specific times or intervals.

Correct Answer: B

---

### QUESTION 3

While updating an enterprise application on a production cluster running across multiple machines, a system administrator must ensure that the application remains available at all times to the users. After updating the application components, what step can be used to accomplish this requirement?

- A. On the last page of the Enterprise Application -> Update wizard, click Rollout Update
- B. Select System Administration -> Nodes, select node names and click Full Resynchronize
- C. Select Enterprise Application -> [application name] -> Stop and then Enterprise Applications -> [application name] -> Start

D. Select Servers -> Clusters ->[clustername] -> RippleStart

Correct Answer: A

---

#### QUESTION 4

A system administrator is installing an enterprise application containing several entity EJBs. All EJBs are contained in the same EJB JAR file. All CMP EJBs in the JAR file, except one, access the same datasources.

What is the MOST efficient way to bind the datasources for the EJBs?

- A. Create a separate EJB JAR file for the EJB that is different and set EJB module datasources on both EJB JARs.
- B. Ask developers to pre-configure the EJB module with the production datasource JNDI names.
- C. Individually, bind each of the EJBs to the datasource they use.
- D. Bind the EJB module to the datasource used by most EJBs, then specify a separate binding for the EJB that is different

Correct Answer: D

---

#### QUESTION 5

Two enterprise applications need to be installed into the WebSphere Application Server environment. Each application has to rely upon authentication through WebSphere security, but must map to different user registers. Which of the following statements is valid?

- A. Both applications can be installed into the same application server and each need to be mapped to separate user registries.
- B. Both applications can be installed into the same node but different application servers.
- C. The applications need to be installed on separate nodes which can be in the same cell.
- D. The applications need to be installed in separate cells.

Correct Answer: D
