### QUESTION 1

Which of the following is a valid statement concerning the WebSphere V6 High Availability Manager ?

- A. The HA Manager enhances the availability of WebSphere singleton services like transaction services, JMS Message services, and Service integration Bus services.
- B. The HA Manager runs as an enterprise application within each application server process that monitors the "health" of WebSphere clusters.
- C. In the event of a server failure, the HA Manager could failover the transaction service which could recover in-flight transactions.
- D. The HA Manager leverages latest storage technologies to provide fast recovery time of both single and two-phase transactions

Correct Answer: C

---

### QUESTION 2

A performance analysis of a customer application revealed that the overhead of persistent HTTP sessions was the main contributor to performance slow down. All of the following factors will help with improving the performance of persistent HTTP session performance EXCEPT:

- A. Reducing the size of the session object
- B. Invalidating unneeded sessions
- C. Increasing the memory available
- D. Increasing the cache overflow size.

Correct Answer: D

---

### QUESTION 3

The customer has deployed a WebSphere-based application that performs excessive database operations. The application is deployed to a 2-node symmetric cluster, with 2 application servers per node, for a cluster size of 4 members. All cluster members are configured identically and there exists no other servers on clusters in this cell. In addition, a data source is defined at the cell-scoped level with a maximum of 100 connections. Given that each database connection consumes 2MB of memory, under peak load, how much of the JVM heap on each server is consumed by connections?

- A. 25MB
- B. 50 MB

C. 100MB

D. 200MB

Correct Answer: D

---

#### QUESTION 4

A system administrator was troubleshooting a problem after configuring the environment for the remote plug-in (http://webserver-hostname/snoop does not work). The system administrator could verify that http://app-server-hostname:9080/snoop and http://webserver-hostname are working properly. Assuming that the system administrator used default values during the installation, which log file will give more information about the problem?

A. error.log under HTTP Server logs directory

B. http\_plugin.log under PLUGIN logs directory

C. SystemOut.log under PROFILE logs directory

D. plugin-cf.xml under PLUGIN logs directory

Correct Answer: D

---

#### QUESTION 5

A site using J2EE security to protect their application the websphere Application Server. An Application is being assembled with Application Server Toolkit and needs to be configured for security. All of these steps are appropriate in this case EXCEPT:

A. Creating the J2EE security roles

B. Creating the j2eesecurity.policy file

C. Creating the security constraints

D. Configuring the login mechanism for the Web module

Correct Answer: B
