QUESTION 1

Sometimes it is required to force an application to create a thread dump (or javacore). Which of the following processes would be used to force a thread dump?

A. Using the wsadmin command prompt, get a handle to the problem application server.

wsadmin>setjvm[$AdminControl completeObjectName type=JVM,process=server1.*]

wsadmin>$AdminControl invoke$jvm dumpAllThreads

Look for an output file in the installation root directory with a name like

javacore.date.time.id.txt.

B. Using the wsadmin command prompt, geta handle to the problem application server.

wsadmin>set jvm[$AdminControl completeObjectName

type=JVM,process=server1,*]

Generate the thread dump:

wsadmin>$AdminControl invoke $jvm dumpAppServerThreads

Look for an output file in the installation root directory with a name like javacore.date.time.id.txt.

C. Using the wsadmin command prompt, geta handle to the problem application server.

wsadmin>set jvm[$AdminControl completeObjectName

type=JVM,process=server1,*]

Generate the thread dump:

wsadmin>$AdminControl invoke $jvm dumpJVMThreads

Look for an output file in the installation root directory with a name like javacore.date.time.id.txt.

D. Using the wsadmin command prompt, geta handle to the problem application server.

wsadmin>set jvm[$AdminControl completeObjectName

type=JVM,process=server1,*]

Generate the thread dump:

wsadmin>$AdminControl invoke $jvm dumpThreads

Look for an output file in the installation root directory with a name like javacore.date.time.id.txt.

Correct Answer: D

QUESTION 2

A system administrator has been requested to package an enterprise application so that all of its required resource definitions are contained in the Enterprise Archive (EAR) File. How can this task be accomplished by using the Application Server Toolkit (AST)?

A. While running in AST, configure the application resources using the administrative console, then export an Enhanced EAR file.

B. While using AST, import the EAR file into the workspace of the Resources perspective, import a previously configured resource .xml file and export an Enhanced EAR file.

C. While using AST, open the application\\'s deployment descriptor editor. Switch to the Deployment page, define the needed resources and export the Enhanced EAR file.

D. Using AST, open each module of the application and define the required resources. Include the configured modules in an enterprise application project and export an Enhanced EAR file.

Correct Answer: C

QUESTION 3

A system administrator is working in a federated cell with Global security enabled. The system administrator wants to use various command line tools to manage the application servers. All of the following command line tools require the system administrator to provide a username and password EXCEPT:

A. startServer

B. stopServer

C. wsadmin

D. stopManager

Correct Answer: A

QUESTION 4

A system administrator has just installed the WebSphere Application Server. The system administrator is interested in turning on global security in order to protect the environment. By enabling global security, all of the following security features will be activated EXCEPT:

A. Common Secure interoperability Version 2 (CSIV2)

B. Authentication to the administrative console

C. SSL between the plug-in and the embedded Web server

D. J2EE security

Correct Answer: C

QUESTION 5

Which of the following are services implemented by the WebSphere Application Server?

A. Session management, Naming, Messaging engine, and the user registry

B. Security, Messaging engine, Naming, HTTP Plug-in

C. The user registry, Transaction service, Naming, and HTTP Plug-in

D. Security, Naming, Messaging engine, and Dynamic Cache

Correct Answer: D
