QUESTION 2

The network operation center has two groups of users that use the native desktop One group, OPERATIONS, requires access to the standard event management tools like acknowledge and delete. They also require access to some custom tools for things like basic troubleshooting (ping and telnet) and ticket creation. The second group, NETWORK, requires access to the same tools used by the OPERATIONS group users. In addition, there are a few tools used for advanced router diagnostics that they use. These tools are not to be available to the OPERATIONS group users. To minimize administration efforts a common desktop menu is used for both groups of users.

The RouterDiag tool, used by NETWORK users, is defined in a menu called DiagTools. The tool is only used for Acme routers. The Acme routers produce SNMP traps, which are converted to events by the MTTrapd probe.

Which option limits this tool for use with only Acme routers?

A. configure the mttrapd.rules file to populate the alerts.status Class column with the value 9999; configure the RouterDiagtool to limit access to only the 9999 Class

B. configure the mttrapd.rules file to populate the alerts.status Class column with the value 9999; configure the DiagToolsmenu to limit access to only the 9999 Class

C. configure the mttrapd.rules file to populate the alerts.status Group column with the value ACME; configure theRouterDiag tool to limit access to only the ACME Group

D. configure the mttrapd.rules file to populate the alerts.status Group column with the value NETWORK; configure theRouterDiag tool to limit access to only the Network Group
