QUESTION 2

You're implementing OES NetWare for a small business client: Jessica's Bakery. There is only one server in the network. You've named the server BAKERY1 and installed it into an eDirectory tree named JESSICASBAKERY-TREE. You've

used a random password generator to create a password for the tree's Admin user.

You've placed the server hardware next to the point-of-sale system in the customer area of the bakery. All workstations have the latest Novell Client installed on them. You created a directory named SHARED on the server's DATA volume

where employees can share files. Does this configuration meet Novell's security recommendations?

- A. Yes, all Novell Security guidelines have been met.
- B. No, you shouldn't use shared directories.
- C. No, the server should be located in a locked room.
- D. No, passwords created with a random password generator aren't complex enough.
- E. No, you shouldn't use the business name in the server or eDirectory tree names.

Correct Answer: C

QUESTION 3

Which utilities can you use to manage directory and file attributes on a NetWare server? (Choose 2.)

- A. ICE
- B. FLAG
- C. iManager
- D. iMonitor
- E. NDS Manager
- F. Remote Manager

Correct Answer: BF

QUESTION 4

You've just created an NSS volume on your OES NetWare server named SHARED. Your server name is WIDGET1. What name will be automatically assigned to the object for this volume in the eDirectory tree?

- A. SHARED
- B. WIDGET1_SHARED
- C. WIDGET1~SHARED
- D. WIDGET1#SHARED
- E. WIDGET1-SHARED
- F. NSS volumes aren't represented by eDirectory objects.

Correct Answer: B

QUESTION 5

You're implementing iFolder in your company. You've already configured the user contexts to be serviced by iFolder. Now you need to configure LDAP to authenticate users to the iFolder server. Click on the option in the iFolder Management Console you would use to do this.

Hot Area:

Item 23 of 66 Time Remaining: 1:08:38

Point and Click

Click the Point and Click button to begin.

You're implementing iFolder in your company. You've already configured the user contexts to be serviced by iFolder. Now you need to configure LDAP to authenticate users to the iFolder server. Click on the option in the iFolder Management Console you would use to do this.

Point and Click

iFolder Management

User: (Not Authenticated)

Novell iFolder

VERSION 2.1

Welcome to iFolder

Please select a management task.

-  Global Settings - Policies, Admin Names, User LDAPs and iFolder Servers.
-  User Management - Search, Add and Manage Users.
-  System Monitoring - Current Status, User LDAPs and iFolder Servers.
-  Reporting - Generate Reports for your iFolder System.

iFolder Features:

- **Large Scale Deployment**
Transparent iFolder server pool
- **Server Support**
NetWare, Windows NT/2000 and Linux
- **HTML Access**
Access your iFolder files through simple HTML
- **Client iFolder Directory**
User can choose location of the iFolder Directory
- **Pass Phrase Recovery**
Administrator can recover user's pass phrase
- **System Monitoring**
Shows status of User LDAPs and iFolder Servers

Click Next (or More) to continue.
