QUESTION 1

When is a SnapShot license required? (Choose 2)

- A. To use Snapshots with NDMP backups
- B. To use Snapshots on a source cluster for SyncIQ
- C. To use Snapshots on a target cluster for SyncIQ
- D. To enable Volume Shadow Copy Service.

Correct Answer: CD

QUESTION 2

What does it mean to truncate an infected file? (Choose 1)

- A. The file is deleted.
- B. The file is broken into multiple smaller files.
- C. All of the files metadata is removed.
- D. The file is reduced to 0 bytes in size.

Correct Answer: D

QUESTION 3

You just licensed SnapShotIQ on a customer's OneFS v6.X cluster. What is the recommended maximum number of snapshots that can be taken per directory? (Choose 1)

- A. 128
- B. 256
- C. 512
- D. 1024

Correct Answer: D

QUESTION 4

When configuring default File Pool Policy settings, selecting Same as data pool when specifying the Snapshot pool allows you to: (Choose 1)

- A. Assign snapshots to disk pools according to the same settings that are configured for data pools.

- B. Assign snapshots to file pools according to the same settings that are configured for data pools.
- C. Assign snapshot pools for file pool use.
- D. Assign filtered files to snapshot pools without restriction.

Correct Answer: A

QUESTION 5

You update a cluster from OneFS 6.0 to OneFS 6.5. The cluster is a member of an LDAP domain. After the upgrade is complete, you check the LDAP settings, but find that LDAP is not configured on the cluster. What happened? (Choose 1)

- A. You misconfigured the upgrade, and must retry to upgrade the cluster.
- B. LDAP standards have changed, so you must rejoin the LDAP domain.
- C. The cluster has changed how it implements LDAP, so you must rejoin the LDAP domain.
- D. You must run the `isi ldap upgrade` command.
- E. The cluster now only supports Legacy LDAP.

Correct Answer: C
