QUESTION 1

A user downloads a Microsoft PowerPoint presentation from a server across the network. The file has been seen before by both Steelhead appliances that are optimizing the link and so the user experiences warm performance. A second user at the same office has a local copy and adds some pictures then uploads the very same file. This file transfer can be considered:

- A. Cold, the data now travels in another direction so the Steelhead appliance needs to relearn the data
- B. Cold, the file has been changed to the file needs to be stored again
- C. Warm, all the data has been seen by the Steelhead appliances before
- D. Warm, the transaction prediction module of the Steelhead appliance can detect the application and accelerate the transfer
- E. Partially warm, the Steelhead appliances only need to learn the new data

Correct Answer: E

QUESTION 2

When enabling the IPSec feature on the Steelhead appliances:

- A. Both optimized and pass-through traffic are encrypted
- B. Only optimized traffic is encrypted
- C. IPSec encrypted traffic is optimized
- D. Only control traffic is encrypted, not user traffic

Correct Answer: B

QUESTION 3

The SteelHead Admission Control feature activates when: (choose two)

- A. The data store has reached full capacity
- B. Throughput exceeds the licensed limit of the appliance
- C. Total connections exceeds the licensed limit of the appliance
- D. Optimization service memory exceeds the limit of the appliance
- E. Optimized connections exceed the licensed limit of the appliance

Correct Answer: BE

Note: Admission Control is a validation process in communication systems where a check is performed before a

connection is established to see if current resources are sufficient for the proposed connection.
