### QUESTION 1

The BIG-IP full proxy architecture has full visibility from the client to the server and from the server to the client.

What security benefit does this provide to customers?

- A. Offloads security functionality from other devices such as network firewalls and Intrusion Prevention Systems (IPS), which may experience performance degradation when inspecting DNS queries and responses.
- B. provides enhanced support for DNS servers.
- C. Establishes highly detailed policies based on your customer's business in requirements, performs multiple factors of authentication, detects corporate versus non-corporate devices, checks OS patch levels, and determines antivirus patch levels.
- D. Provides industry-leading knowledge of application behavior as it travels through a network, and it applies that knowledge to security because it knows how an application behaves at any point in the reply request process

Correct Answer: D

---

### QUESTION 2

Which of the following methods of protection operates on server responses?

- A. Dynamic parameter protection
- B. Response code validation and response scrubbing
- C. Response code validation and HTTP method validation
- D. HTTP RFC compliancy check and metacharacter enforcement

Correct Answer: B

---

### QUESTION 3

How does the ARX eliminate the disruption caused by re-provisioning storage?

- A. By identifying data that has not been modified and moving it to a secondary tier.
- B. By reducing the time necessary to run a complete backup.
- C. By allowing system administrators to apply policy to specific types data.
- D. By automating capacity balancing and allowing seamless introduction of file systems into the environment after the ARX is installed.

Correct Answer: D

---

#### QUESTION 4

A site wishes to perform source address translation on packets arriving from the Internet for clients using some pools but not others. The determination is not based on the client's IP address, but on the pool they are load balanced to. What could best accomplish this goal?

- A. A SNAT for all addresses could be defined, and then disable the SNAT processing for select pools.
- B. The decision to perform source address translation is always based on VLAN. Thus, the goal cannot be achieved.
- C. For each virtual server, regardless their default load balancing pools, association with SNAT pools could vary dependent upon need.
- D. The decision to perform source address translation is always based on a client's address (or network). Thus, this goal cannot be achieved.

Correct Answer: A

---

#### QUESTION 5

What is a common use of an iRule?

- A. to modify application traffic between the client and server
- B. to create a reusable application delivery template
- C. to integrate a BIG IP into an enterprise orchestration tool
- D. to create an accelerated session between two BIG-IP devices

Correct Answer: A
