QUESTION 1

How many users can have read/write access in Gaia at one time?

- A. Infinite
- B. One
- C. Three
- D. Two

Correct Answer: B

QUESTION 2

Fill in the blank: Service blades must be attached to a _____.

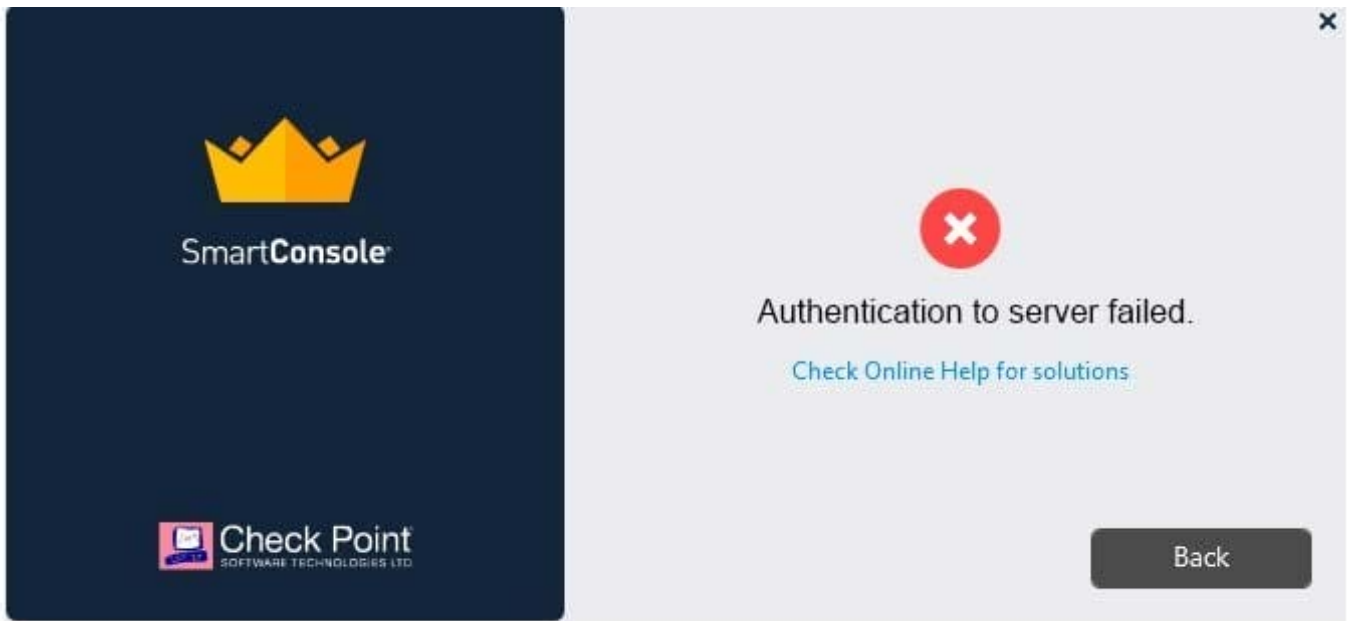

- A. Security Gateway
- B. Management container
- C. Management server
- D. Security Gateway container

Correct Answer: A

QUESTION 3

Vanessa is attempting to log into the Gaia Web Portal. She is able to login successfully. Then she tries the same username and password for SmartConsole but gets the message in the screenshot image below. She has checked that the IP address of the Server is correct and the username and password she used to login into Gaia is also correct.

What is the most likely reason?

- A. Check Point R80 SmartConsole authentication is more secure than in previous versions and Vanessa requires a special authentication key for R80 SmartConsole. Check that the correct key details are used.
- B. Check Point Management software authentication details are not automatically the same as the Operating System authentication details. Check that she is using the correct details.
- C. SmartConsole Authentication is not allowed for Vanessa until a Super administrator has logged in first and cleared any other administrator sessions.
- D. Authentication failed because Vanessa's username is not allowed in the new Threat Prevention console update checks even though these checks passed with Gaia.

Correct Answer: B

QUESTION 4

Choose the Best place to find a Security Management Server backup file named backup_fw, on a Check Point Appliance.

- A. /var/log/Cpbackup/backups/backup/backup_fw.tgs
- B. /var/log/Cpbackup/backups/backup/backup_fw.tar
- C. /var/log/Cpbackup/backups/backups/backup_fw.tar
- D. /var/log/Cpbackup/backups/backup_fw.tgz

Correct Answer: D

Gaia's Backup feature allows backing up the configuration of the Gaia OS and of the Security Management server database, or restoring a previously saved configuration.

The configuration is saved to a .tgz file in the following directory:

Gaia OS Version	Hardware	Local Directory
R75.40 - R77.20	Check Point appliances	/var/log/CPbackup/backups/
	Open Server	/var/CPbackup/backups/
R77.30	Check Point appliances	/var/log/CPbackup/backups/
	Open Server

QUESTION 5

Which one of the following is the preferred licensing model? Select the Best answer.

- A. Local licensing because it ties the package license to the IP-address of the gateway and has no dependency of the Security Management Server.
- B. Central licensing because it ties the package license to the IP-address of the Security Management Server and has no dependency of the gateway.
- C. Local licensing because it ties the package license to the MAC-address of the gateway management interface and has no Security Management Server dependency.
- D. Central licensing because it ties the package license to the MAC-address of the Security Management Server Mgmt-interface and has no dependency of the gateway.

Correct Answer: B

Central License A Central License is a license attached to the Security Management server IP address, rather than the gateway IP address. The benefits of a Central License are:

1.

Only one IP address is needed for all licenses.

2.

A license can be taken from one gateway and given to another.

3.

The new license remains valid when changing the gateway IP address. There is no need to create and install a new license. Reference:
