QUESTION 4

You are working with multiple Security Gateways enforcing an extensive number of rules. To simplify security administration, which action would you choose?

A. Eliminate all possible contradictory rules such as the Stealth or Cleanup rules.

B. Create a separate Security Policy package for each remote Security Gateway.

C. Create network objects that restricts all applicable rules to only certain networks.

D. Run separate SmartConsole instances to login and configure each Security Gateway directly.

Correct Answer: B

QUESTION 5

Which member of a high-availability cluster should be upgraded first in a Zero downtime upgrade?

A. The Standby Member

B. The Active Member

C. The Primary Member

D. The Secondary Member

Correct Answer: A

During the upgrade procedure, standby members are upgraded first. When upgrade on the final active member begins, the active member fails over to the standby member (or members, depending on the deployment: High Availability or Load Sharing). At this point, since connection tables between cluster members are not synced, all open connections are lost. Only a full connectivity upgrade (between minor versions) preserves open connections.
