QUESTION 1

The name of the script responsible for MDS\\' automatic start is:

A. Mdsstart

B. Mds1

C. firewall1

D. Fwstart

Correct Answer: C

QUESTION 2

The main MDS process (fwm mds) looks for CMAs which are up and can be reached, but with which it has no CPMI connections This connection is used for collecting statuses on the CMA and its gateways, and for receiving changes in objects that are relevant to the MDS/MDG system Normally, a special task wakes up every 120 seconds and searches for "CMA connection candidates" If the task has found connection candidates previously, then by default it wakes up after only 90 seconds This shorter interval boosts CMAs connections upon MDS startup.

Which action changes the status collection interval?

A. Set the variable MSP_RETRY_INIT_INTERVAL to the desired number of seconds

B. Set the variable RETRY_INIT_INTERVAL to the desired number of seconds

C. Set the variable MSP_RETRY_INTERVAL to the desired number of seconds

D. Set the variable RETRY_INTERVAL to the desired number of seconds

Correct Answer: A

QUESTION 3

Which of the following databases is NOT synchronized in an MDS HA environment?

A. MDS Database

B. Internal Certificate Authority Database

C. CMA Database

D. Global Properties Database

Correct Answer: C

QUESTION 4

Where would you configure a Global VPN community between gateways on different CMAs?

A. On each individual CMA

B. Using a third party OPSEC certified VPN application

C. In the Global Rule Base, under VPN communities

D. Gateways on different CMA\\\'s can\\\'t participate in a single VPN community

Correct Answer: C

QUESTION 5

Let\\\'s assume that your Multi-Domain Management with Provider-1 configuration has only one MDS You want the installation to be redundant, so you decide to set up a secondary MDS Container and Manager While completing the installation, you need to provide the activation key The installation is completed after a reboot The final steps are taken with the MDG connecting to the primary MDS.

Which of the following statements is TRUE?

A. When the activation key is provided, synchronization at MDS as well as CMA level is started automatically

B. The first step is to define the secondary MDS in the MDG and to provide the activation key After this is done, it is not possible to synchronize at MDS level only because only the complete configuration of a MDS can be synchronized (including all CMAs)

C. Before synchronization can start, both the activation key and performing an Install Database are necessary

D. When the secondary MDS is defined in the MDG and the activation key has been correct, synchronization at the MDS level can be started immediately

Correct Answer: D
