QUESTION 1

What command should you use to see the direct URL of a package?

- A. show rsp slots
- B. show rsp modules
- C. show rsp platform
- D. show rsp packages
- E. show rsp vms

Correct Answer: A

QUESTION 2

A deployment has two parallel Interceptor appliances (A and B) each across a different link directed at different data center locations. Each data center has one Steelhead appliance (Steelhead-1 or Steelhead2). The administrator wants probes coming into Interceptor A to be first serviced by Steelhead-1, then Steelhead-2 only if Steelhead-1 is full or unavailable. What is the most appropriate rule to be configured?

- A. A Redirect Load Balancing rule containing Steelhead-1 and Steelhead-2
- B. No Load Balancing rules are needed for the administrator's policy
- C. Two Redirect Load Balancing rules; first rule for Steelhead-1 and second rule for Steelhead-2
- D. Two Redirect Load Balancing rules; first for both Steelhead-1 and Steelhead-2, second one for Steelhead-2

Correct Answer: C

QUESTION 3

Consider a SteelHead deployment with SMB optimization and SMB signing enabled on all SteelHeads. The client is configured to have signing enabled and the server has signing disabled. What will happen to SMB connections between these two hosts?

- A. The connection will be unsigned but allowed. The SteelHead does not need to have SMB signing enabled to accommodate this connection.
- B. The connection will not be allowed, as signing is enabled on the client and disabled on the server.
- C. The connection will be allowed and will be signed as the client determines whether SMB signing is used or not.
- D. The connection will be allowed, and will be signed between the client and client-side SteelHead.

Correct Answer: A

QUESTION 4

When upgrading a Virtual Steelhead appliance, what steps can be taken to preserve the existing datastore?

- A. When upgrading a Virtual Steelhead appliance, it is not possible to preserve the existing datastore
- B. Detach the existing datastore and re-attach to the new Virtual Steelhead appliance
- C. Run vMotion and move the datastore to a different ESX host before performing the upgrade and then bring it back afterwards
- D. Move the existing datastore to an NFS share and move it back after the upgrade

Correct Answer: A

QUESTION 5

Which two of the following attributes are required to be added to a TACACS+ server to enable monitor and admin logon access to the CMC appliance via TACACS: (Select 2)

- A. service = rbt-exec {local-user-name = "monitor"}
- B. service = wan-accel {local-user-name = "monitor"}
- C. service = rbt-exec {local-user-name = "admin"}
- D. service = wan-accel {local-user-name = "admin"}
- E. service = rbt-exec {local-user-name = "su"}

Correct Answer: AC
