QUESTION 1

What are two potential risks in the existing environment that the architect must address in the proposed virtual solution? (Choose two.)

- A. Local profiles are used and administrators manually delete them when necessary.
- B. Installation of PositivelyPeople is performed manually based on a thoroughly documented process.
- C. No logon scripts are enabled for users because the company abandoned logon scripts last year in favor of GPOs.
- D. Users log on to the company environment based on Active Directory credentials, but the PositivelyFinance application requires secondary credentials.

Correct Answer: AB

QUESTION 2

Why is this the best design for the XenServer resource pools?

- A. This design addresses all of the customer requirements by ensuring appropriate design of resource pools, high availability for critical workloads, such as the database server, as well as incorporating the new storage solution for disaster recovery purposes. This also takes into account server OS machine and desktop OS machine characteristics.
- B. This design is the most suitable since it ensures simple setup with redundancy and meets the requirement of separating the operating system types.
- C. The resource pools are based on roles, and workloads can be moved from one resource pool to another in case of maintenance as well as for disaster recovery purposes.
- D. This design is best suitable to the customer requirements because the separation of server workloads and virtual desktop workloads in different resource pools optimizes the performance and high availability.

Correct Answer: A

QUESTION 3

How should the architect specify that the Configuration Logging database be queried?

- A. By using the Citrix Director console
- B. By using SQL Management Studio
- C. By using SQL Reporting Services
- D. By using PowerShell

Correct Answer: B

QUESTION 4

Why does using Workflow Studio help manage the image release process?

- A. Because it can script automatic upgrades of the deployment template
- B. Because it provides centralized, automated single image management
- C. Because it facilitates consistent deployment of base images
- D. Because Workflow Studio scripts can be executed from the same network share as the deployment template

Correct Answer: B

QUESTION 5

An architect needs to design a solution that optimizes resource usage for Call Center users. How do server OS machines achieve this goal?

- A. By offering optimal performance
- B. By providing rapid application rollouts
- C. By ensuring the greatest security level by design
- D. By accommodating high user density on each server

Correct Answer: D
