QUESTION 1

Scenario: An administrator recently configured Session Reliability on a XenApp server which delivers one published application to 20 users on the local network. After configuring Session Reliability, the administrator ran Microsoft TCPView to monitor a service that Session Reliability uses. The administrator notices that users are connecting to the published application on port 443 but NOT on the default Session Reliability port. The administrator verified that Session Reliability is configured and working.

Which two reasons explain why the users are connecting to the published application on port 443? (Choose two.)

A. SSL/TLS is enabled in the published application\\'s properties.

B. Data encryption has been enabled using the SSL Relay Configuration tool.

C. A policy is enabled to encrypt the session data between the server and user devices.

D. The published application is configured to allow connections made through Access Gateway Advanced Edition.

Correct Answer: AB

QUESTION 2

Scenario: A company has 10 XenApp servers. The administrator has changed the recovery action of the

MS Print Spooler Test of Health Monitoring and Recovery to prohibit logons and connections to the server.

Users report printing problems when connecting to three of the XenApp servers.

Using Health Monitoring and Recovery to allow additional XenApp servers to be excluded from load

balancing, the administrator should change the _____.

(Choose the correct option to complete the sentence.)

A. minimum percent of online servers default value of 5 percent

B. maximum percent of offline servers default value of 5 percent

C. minimum percent of online servers default value of 10 percent

D. maximum percent of offline servers default value of 10 percent

Correct Answer: D

QUESTION 3

Scenario: A XenApp administrator must recommend a database option for the new XenApp 6.5 data store. The new farm will have more than 100 XenApp servers and 500 published resources, support more than 5,000 concurrent users and have two zones separated by a WAN connection.

Which two database options should the administrator recommend? (Choose two.)

A. IBM DB2 9.7

B. Oracle Enterprise 11.1

C. Microsoft SQL Server 2008

D. Microsoft SQL Server Express 2008

Correct Answer: BC

QUESTION 4

Laptop users need to use a XenApp published application when they are disconnected from the corporate network.

Which two plugins should an administrator install and where should they be installed to meet the laptop user requirements? (Choose two.)

A. Citrix offline plug-in on the laptop

B. Citrix online plug-in on the laptop

C. Citrix streaming profiler on the laptop

D. Citrix offline plug-in on the XenApp server

E. Citrix online plug-in on the XenApp server

F. Citrix streaming profiler on the XenApp server

Correct Answer: AB

QUESTION 5

Which policy should an administrator configure so that if all servers in a worker group go offline, XenApp redirects user connections to a backup worker group?

A. Citrix User

B. Load Evaluator

C. Load Balancing

D. Citrix Computer

Correct Answer: C
