QUESTION 1

Scenario: An administrator wishes to temporarily move users to servers in the disaster recovery site so maintenance can be performed on the production servers.

A load balancing policy is used to direct users to the production site.

Which change to the load balancing policy should the administrator make to achieve this?

- A. Reverse the worker group priorities.
- B. Remove the worker group representing the primary site.
- C. Deselect the option to connect applications based on worker group preference.
- D. Apply a temporary filter based on the IP address range of the disaster recovery site.

Correct Answer: A

QUESTION 2

Scenario: A company has two XenApp 6.5 farms and two Web Interface servers, each hosting a specific business application. Because of legal reasons, the applications CANNOT be delivered from a single farm. Users complain that they often use the wrong URL or do NOT see the application they require.

Which two tasks can an administrator complete to reduce the users' confusion? (Choose two.)

- A. Use a load balancer to provide a single URL to both Web Interface servers.
- B. On each Web Interface server, create a new Web Interface site for the alternate farm.
- C. On each Web Interface server, add a second farm that is configured with at least one XML gateway from the alternate farm.
- D. On each Web Interface server, modify the existing farm configuration and add at least one XML gateway from the alternate farm.
- E. Customize the Web Interface footer text on both Web Interface servers to remind the users of which applications are provided by the current server.

Correct Answer: AC

QUESTION 3

Scenario: A server farm has three policies using the Client IP address and User filters.

Policy A (priority 1) prevents client IP addresses in the 208.29.80.* range from accessing network and optical drives. All other settings are disabled.

Policy B (priority 2) prevents client IP addresses in the 208.29.85.* range from accessing network, client and removable

drives. No other settings are configured.

Policy C (priority 3) allows all domain users to access network, client, optical and removable drives. All other settings are disabled.

Which drives will be available to a domain user accessing the server farm from a client using the 208.29.85.152 IP address?

- A. No drives
- B. Optical drives
- C. Client and removable drives
- D. Network, client and removable drives
- E. Network, client, optical and removable drives

Correct Answer: B

QUESTION 4

Scenario: An administrator plans to add printer drivers to the auto-replication list in a XenApp 6.5 environment. The administrator needs to ensure that a specific vendor printer driver is available on all servers in the farm including any new servers that are added at a later date.

How must the administrator add printer drivers to the auto-replication list?

- A. Through a Citrix policy
- B. With a PowerShell cmdlet
- C. With the PrintCfg.exe tool
- D. In a per-server registry setting

Correct Answer: B

QUESTION 5

Scenario: A XenApp administrator must recommend a database option for the new XenApp 6.5 data store. The new farm will have more than 100 XenApp servers and 500 published resources, support more than 5,000 concurrent users and have two zones separated by a WAN connection.

Which two database options should the administrator recommend? (Choose two.)

- A. IBM DB2 9.7
- B. Oracle Enterprise 11.1
- C. Microsoft SQL Server 2008

D. Microsoft SQL Server Express 2008

Correct Answer: BC
