QUESTION 1

Scenario: An administrator has a server farm with five servers. The administrator wants to limit the number of Microsoft Excel published application sessions that can be run in the server farm. Which two steps could the administrator take to meet this requirement? (Choose two.)

A. Configure the Load Throttling rule.

B. Configure the Server User Load rule.

C. Configure the Application User Load rule.

D. Assign a load evaluator to the five servers.

E. Assign a load evaluator to the published application.

Correct Answer: CE

QUESTION 2

Scenario: A Citrix administrator manages a XenApp farm with hundreds of task workers. Management desires that user profiles be kept to a minimum size and stored in a centralized location. User changes must NOT be retained at logoff.

Based on these requirements, which type of profile should the administrator implement?

A. Local

B. Roaming

C. Mandatory

D. Citrix Profile Management

Correct Answer: C

QUESTION 3

Scenario: An administrator is hired to implement a new XenApp server farm in an existing network. The administrator needs to manage the Citrix license server, which is located behind a firewall.

Which port should the administrator ask the network security team to configure on the firewall to allow the administrator to manage the license server?

A. 135

B. 2513

C. 7279

D. 8082

E. 27000

Correct Answer: D

QUESTION 4

Which two methods can an administrator use to manually install a third-party printer driver while ensuring that only the core required driver components are present in the XenApp environment? (Choose two.)

A. The AppCenter

B. Print Server Properties

C. The XenApp Server Role Manager

D. The vendor-supplied setup.exe file

E. The Microsoft Print Management Console

Correct Answer: BE

QUESTION 5

Scenario: A company has 10 XenApp servers. The administrator has changed the recovery action of the

MS Print Spooler Test of Health Monitoring and Recovery to prohibit logons and connections to the server.

Users report printing problems when connecting to three of the XenApp servers.

Using Health Monitoring and Recovery to allow additional XenApp servers to be excluded from load

balancing, the administrator should change the _____.

(Choose the correct option to complete the sentence.)

A. minimum percent of online servers default value of 5 percent

B. maximum percent of offline servers default value of 5 percent

C. minimum percent of online servers default value of 10 percent

D. maximum percent of offline servers default value of 10 percent

Correct Answer: D
