### QUESTION 1

What must be true in order to integrate Active Directory authentication with a XenServer host?

- A. LDAP port 389 is open for inbound traffic to the XenServer host.
- B. The Active Directory administrator account is created locally on the XenServer host.
- C. The same DNS server is used for both the Active Directory server and the XenServer host.
- D. RAS authentication is used for communication between the Active Directory server and the XenServer host.

Correct Answer: C

---

### QUESTION 2

An administrator needs to export a virtual machine to an NFS share mounted on a XenServer host.

Which xe CLI command does the administrator need to execute from a remote machine to perform the virtual machine export?

- A. `xe vm-export -h filename=`
- B. `xe vm-export -h -u -pw vm=`
- C. `xe vm-export -h -u -pw filename=`
- D. `xe vm-export -h -u -pw vm= filename=`

Correct Answer: D

---

### QUESTION 3

Which two policy modes must the administrator apply to implement a XenServer workload balancing policy to reduce power consumption and energy costs during off peak hours? (Choose two.)

- A. Maximize Density
- B. Fixed Optimization
- C. Maximize Performance
- D. Scheduled Optimization

Correct Answer: AD

---

### QUESTION 4

Scenario: An administrator is in the process of updating a database server on a virtual machine and would like to

preserve its current state in case something goes wrong. The virtual machine is being used in a production environment and needs to remain online.

What can the administrator do to meet the requirements of the scenario?

- A. Preserve the virtual machine by exporting it to an external drive.
- B. Enable high availability to ensure the virtual machine remains online.
- C. Perform an online backup by taking a snapshot of the virtual machine.
- D. Make a copy of the virtual machine in case the original needs to be deleted.

Correct Answer: C

---

#### QUESTION 5

An administrator notices that the target device is NOT starting from a newly created vDisk, but other target devices using different vDisks are working.

Which action can the administrator take to correct this issue?

- A. Restart the Stream Service.
- B. Enable streaming on the vDisk.
- C. Reset the Active Directory machine account password.
- D. Change the vDisk access mode to Private Image mode.

Correct Answer: B
