QUESTION 1

Scenario: An administrator is moving a XenServer host from the New York datacenter to the London datacenter. During the installation of XenServer, the default NTP settings were selected.

How must the administrator ensure that the XenServer host has the correct time settings?

- A. Configure the time in the host BIOS.
- B. Configure the time zone in the ntp.conf file.
- C. Change the time zone using the xsconsole.
- D. Change the NTP servers to the London NTP servers.

Correct Answer: C

QUESTION 2

What is the last step required to enable the offline database within Provisioning services?

- A. Enable auditing.
- B. Enable automatic merge.
- C. Restart the SOAP Service.
- D. Restart the Stream Service.

Correct Answer: D

QUESTION 3

The development team requires that a virtual machine be restored to the state it was on the previous day, but will need parallel access to the current state of the virtual machine.

What can an administrator do to meet the requirements of the scenario?

- A. Revert the virtual machine back to the previous snapshot and start it.
- B. Create a new virtual machine from the previous snapshot and start it.
- C. Make a copy of the virtual machine, revert it to the previous snapshot and start it.
- D. Take a snapshot of the current state of the virtual machine and revert it to the previous snapshot.

Correct Answer: B

QUESTION 4

Scenario: An administrator CANNOT use XenCenter to manage an existing XenServer host in a resource pool. The administrator found that the XenServer host CANNOT communicate properly with XAPI.

What could be causing the communication issue on the failed host?

- A. Dom0 is out of space.
- B. NTP is NOT configured.
- C. The root password is unknown.
- D. The host CANNOT connect to Active Directory.

Correct Answer: A

QUESTION 5

Scenario: In preparation for adding a new iSCSI SAN to the environment, an administrator needs to separate the storage traffic from the XenServer management traffic. The host is connected to the iSCSI SAN on the 192.168.30.0/24 subnet using NIC 3.

What must the administrator create to separate the storage network traffic?

- A. A bonded network
- B. An external network
- C. A management interface
- D. A single-server private network

Correct Answer: C
