### QUESTION 1

Scenario: An administrator needs to configure a private network between virtual machines on two hosts in a pool using XenCenter. However, the option to select the appropriate network type is NOT available.

Which XenServer component must the administrator use to enable the correct network type?

- A. NIC bond
- B. DVS controller
- C. XenServer Tools
- D. DWLB appliance

Correct Answer: B

---

### QUESTION 2

Scenario: An administrator is creating a vDisk image of a physical Windows server using XenConvert. This vDisk is going to be used by multiple target devices in Standard Image mode.

What does the administrator need to do during the physical-to-virtual conversion to increase the vDisk performance?

- A. SysPrep the vDisk.
- B. Optimize the vDisk.
- C. Run the Windows server in Safe mode.
- D. Defragment the physical hard disk before conversion.

Correct Answer: B

---

### QUESTION 3

Which two policy modes must the administrator apply to implement a XenServer workload balancing policy to help reduce power consumption and energy costs during all hours? (Choose two.)

- A. Maximize Density
- B. Fixed Optimization
- C. Maximize Performance
- D. Scheduled Optimization

Correct Answer: AB

---

#### QUESTION 4

An administrator needs to create a network Access Control List for a group of hosts in XenServer. Which Access Control List should the administrator choose?

- A. VM
- B. VIF
- C. Global
- D. Resource Pool

Correct Answer: D

---

#### QUESTION 5

Scenario: An administrator realizes that the XenServer pool master has experienced an unrecoverable issue and crashed over the weekend. High availability is currently disabled.

Which command must the administrator run on the XenServer CLI of a pool member to recover the XenServer pool?

- A. xe pool-ha-enable
- B. xe pool-recover-slaves
- C. xe pool-designate-new-master
- D. xe pool-emergency-transition-to-master

Correct Answer: D
