QUESTION 1

Scenario: An administrator is moving a XenServer host from the New York datacenter to the London datacenter. During the installation of XenServer, the default NTP settings were selected.

How must the administrator ensure that the XenServer host has the correct time settings?

- A. Configure the time in the host BIOS.
- B. Configure the time zone in the ntp.conf file.
- C. Change the time zone using the xsconsole.
- D. Change the NTP servers to the London NTP servers.

Correct Answer: C

QUESTION 2

Scenario: An administrator is troubleshooting a Provisioning services environment. After the administrator configured a new version of the vDisk for 10 identical target devices all running on the same XenServer host, the administrator discovers that only the first target device started with the new vDisk configured. The other nine target devices failed to startup.

What is one of the steps the administrator should take to resolve this issue?

- A. Configure the PXE Service.
- B. Configure the bootstrap file.
- C. Restart the Stream Service.
- D. Change the vDisk access mode.

Correct Answer: D

QUESTION 3

Scenario: An administrator built four new hosts in an existing XenServer pool that already has multiple hosts connected to a shared storage over Fibre Channel. The administrator discovered that the new hosts are NOT able to connect to the existing storage repositories.

Which two steps can the administrator take to resolve the issue? (Choose two.)

- A. Check the log files.
- B. Recreate the storage repositories.
- C. Verify that the LUNs are mapped and zoned correctly.
- D. Convert the storage repositories to shared storage repositories.

Correct Answer: AC

QUESTION 4

Scenario: XenServer Pool1 must be configured to provide fault tolerance in case a host fails. Pool1 consists of 10 XenServer hosts.

Which command should the administrator execute to enable fault tolerance?

- A. `xe pool-param-add`
- B. `xe pool-join name=Pool1`
- C. `xe pool-ha-enable name=Pool1`
- D. `xe pool-ha-enable heartbeat-sr-uuids=`

Correct Answer: D

QUESTION 5

Scenario: An administrator needs to add a new server to an existing pool in a remote datacenter. The administrator has NO access to XenCenter.

Which command does the administrator need to use to prepare a XenServer host before adding it to a heterogeneous resource pool?

- A. `host-cpu-list`
- B. `host-sync-data`
- C. `host-param-set`
- D. `host-set-cpu-features`

Correct Answer: D
