QUESTION 1

In which of the scenario will the DBA perform recovery? (Choose all that apply.)

- A. The alert log file is corrupted
- B. A tablespace is accidentally dropped
- C. One of the redo log members is corrupted
- D. A database user terminates the session abnormally
- E. The hard disk on which the data files is stored is corrupted

Correct Answer: BE

QUESTION 2

Which two statements are true regarding a tablespace? (Choose two.)

- A. It can span multiple databases
- B. It can consist of multiple data files
- C. It can contain blocks of different files
- D. It can contains segments of different sizes
- E. It can contains a part of nonpartitioned segment

Correct Answer: BD

QUESTION 3

You created a profile APP_USER and assigned it to the users. After a month, you decide to drop the profile. Some user sessions are currently connected to the database instance and are using the APP_USER profile.

This command is used to drop the profile:

```
SQL> DROP PROFILE app_user;
```

Which statement describes the result?

- A. The command produces an error.
- B. The profile is dropped and current user sessions use the DEFAULT profile immediately.
- C. The profile is dropped and only the subsequent user sessions use the DEFAULT profile.
- D. The profile is dropped, the sessions are terminated, and the subsequent user sessions use the DEFAULT profile.

Correct Answer: A

QUESTION 4

You want to use the ALTER SYSTEM statement with SCOPE=MEMORY to change an initialization parameter value.

Which is true?

- A. The change occurs immediately in memory for dynamic parameters but it is not persistent after instance restart
- B. It can be used only if an spfile is used
- C. The change occurs immediately in memory for static parameters but it is not persistent after instance restart
- D. It can be used only if a pfile is used

Correct Answer: A

QUESTION 5

In a system, large online transaction processing (OLTP) jobs run during the daytime that require a large database buffer cache. In the night, the system supports batch jobs that require a higher value to be set for the large pool. You must simultaneously configure the memory components to accommodate the peak requirement.

What would you do to automate this configuration for the memory components with change in mode of working?

- A. Set the SGA_TARGET initialization parameter to zero.
- B. Set the PRE_PAGE_SGA initialization parameter to TRUE.
- C. Set the MEMORY_MAX_TARGET initialization parameter to zero.
- D. Set the SGA_TARGET initialization parameter to a nonzero value.

Correct Answer: D
