QUESTION 1

These are points that describe the contents of different memory components:

1: Descriptive information or metadata about schema objects that are queried by using SQL statements

2: The runtime area for data manipulation language (DML) or data definition language (DDL) statements

3: Results of SQL queries and PL/SQL functions 4: Executable forms of SQL cursors, PL/SQL programs, and Java classes

5:

The information necessary to reconstruct changes made to the database by a transaction Which of these will be stored in the Shared Pool if the necessary configurations are done?

A.

1 and 2

B.

2 and 5

C.

1,3, and 4

D.

3,4 and 5

E.

1,2,3 and 4

Correct Answer: C

QUESTION 2

The job to gather optimizer statistics for objects runs as part of the automatic maintenance window in your database instance. At a certain point of time, the maintenance window closes before the statistics are gathered for all objects.

Which statement is true in this scenario?

A. The statistics collection continues until all objects are processed.

B. The job is terminated and the statistics collected are restored to a time before the job started.

C. This produces an error and the statistics collected are locked until the next time that the maintenance window is opened.

D. The job is terminated and the statistics for the remaining objects are collected the next time that the maintenance

window is opened.

Correct Answer: D

QUESTION 3

You suspect unauthorized data manipulation language (DML) operations on a particular table. You want to track users who are performing the transactions and the values used in the transactions. You also plan to transfer these values to another table for analysis. How would you achieve this?

A. by using triggers

B. by using Data Pump

C. by using external tables

D. by using anonymous PL/SQL blocks

Correct Answer: A

QUESTION 4

In your database, the current status of a PL/SQL procedure has become INVALID. Which action would fix the problem and make the PL/SQL procedure usable?

A. Recompile the PL/SQL procedure.

B. Modify the procedure to run with a definer\\'s right.

C. Modify the procedure to run with an invoker\\'s right.

D. Grant the EXECUTE privilege on the PL/SQL procedure to PUBLIC.

Correct Answer: A

QUESTION 5

You have executed this command to change the size of the database buffer cache:

SQL> ALTER SYSTEM SET DB_CACHE_SIZE=2516582;

System altered.

To verify the change in size, you executed this command:

```
SQL> SHOW PARAMETER DB_CACHE_SIZE

NAME              TYPE          VALUE
----------------- ------------- -----------------
db_cache_size     big integer   4194304
```

Why is the value set to 4194304 and not to 2516582?

A. Because 4194304 is the granule size

B. Because 4194304 is the standard block size

C. Because 4194304 is the largest nonstandard block size defined in the database

D. Because 4194304 is the total size of data already available in the database buffer cache

Correct Answer: A
