-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Your system is upgraded from Oracle Database 10g to Oracle Database 11g. You imported SQL Tuning Sets (STS) from the previous version. After running the SQL Performance Analyzer for optimizer version change, you observe performance regression for a few SQL statements. What would you suggest to avoid performance regression for these SQL statements?

- A. Include the old plans in the SQL plan baseline.
- B. Use DBMS\_SPM.EVOLVE\_SQL\_PLAN\_BASELINE to evolve plans.
- C. Set the OPTIMIZER\_USE\_PENDING\_STATISTICS parameter to TRUE.
- D. Increase the value for the OPTIMIZER\_DYNAMIC\_SAMPLING parameter.

Correct Answer: A

---

**QUESTION 2**

There are 500 users of an online transaction processing (OLTP) application that resides in your database. The system had been maintaining an average response rate of 10 seconds as specified by the Service-Level Agreement (SLA). This morning you were informed that for the past four days the average response time has gone up to 15-20 seconds. No changes have been made to the hardware or networking setup. What is the first thing that you should do to diagnose the cause of the slow response time?

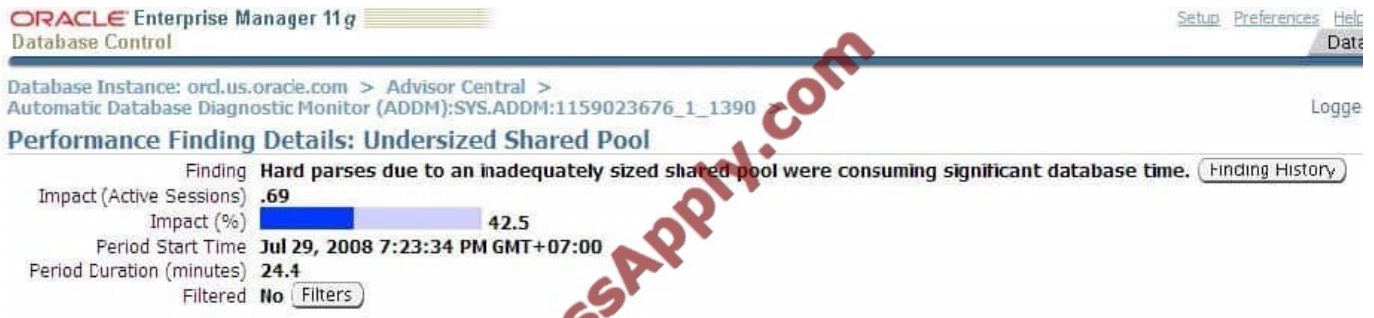

- A. Determine whether it is a memory configuration issue.
- B. Determine whether the slow response is wait bound or CPU bound.
- C. Determine whether the application is performing excessive I/O due to poor access path choice.
- D. Determine whether new tablespaces have been created on the disks that are being used by the existing tablespaces.

Correct Answer: B

---

**QUESTION 3**

You are working on a database that was upgraded to Oracle Database 11g from Oracle Database 9i. An ADDM finding in this database says that the shared pool is inadequately sized, as shown in the Exhibit.

You diagnosed that this is due to different kinds of workloads and this occurs only during peak hours. The following are the related parameter settings: SQL> show parameter sga name TYPE VALUE -----  
----- lock\_sga boolean FALSE pre\_page\_sga boolean FALSE sga\_max\_size big integer 300M sga\_target big integer 0 SQL> show parameter target name TYPE VALUE -----  
fast\_start\_mtrr\_target integer 0 memory\_max\_target big integer 0 memory\_target big integer 0 pga\_aggregate\_target big integer 100M sga\_target big integer 0

You want to balance the memory between the System Global Area (SGA) components within the SGA depending on the workloads. Which two options would solve this problem? (Choose two.)

- A. Set the SGA\_TARGET parameter to 300M.
- B. Set the SGA\_MAX\_SIZE parameter to 400M.
- C. Set the MEMORY\_MAX\_TARGET and MEMORY\_TARGET parameters to 400M.
- D. Set the MEMORY\_MAX\_TARGET and MEMORY\_TARGET parameters to 100M.
- E. Set the PGA\_AGGREGATE\_TARGET parameter to 200M and the SGA\_MAX\_SIZE parameter to 400M.

Correct Answer: AC

#### QUESTION 4

Which two statements are true about the database buffer cache? (Choose two.)

- A. A buffer can be written to by many processes at the same time.
- B. A buffer containing a block that is identical to the block on disk is called free buffer.
- C. A buffer containing a block that is being accessed by a process is called dirty buffer.
- D. A buffer available to be overwritten with a different database block at any time is called a dirty buffer.
- E. A buffer can contain a different version of a block that is available in a different buffer of the same cache.

Correct Answer: BE

#### QUESTION 5

Identify the situation in which you would use the Automatic Workload Repository (AWR) baseline template.

- A. when creating AWR snapshots based on a repeating time schedule
- B. when creating and dropping AWR baselines based on a repeating time schedule
- C. when computing statistics for all moving window baselines based on a repeating time schedule in the future
- D. when resetting the threshold values for the SYSTEM\_MOVING\_WINDOW baseline based on a repeating time schedule in the future

Correct Answer: B
