### QUESTION 1

What are three purposes of the RMAN "FROM" clause?

- A. to support PUSH-based active database duplication
- B. to support synchronization of a standby database with the primary database in a Data environment
- C. to support PULL-based active database duplication
- D. to support file restores over the network in a Data Guard environment
- E. to support file recovery over the network in a Data Guard environment

Correct Answer: BDE

\*

With a control file autobackup, RMAN can recover the database even if the current control file, recovery catalog, and server parameter file are inaccessible.

\*

RMAN uses a recovery catalog to track filenames for all database files in a Data Guard environment. A recovery catalog is a database schema used by RMAN to store metadata about one or more Oracle databases. The catalog also records where the online redo logs, standby redo logs, tempfiles, archived redo logs, backup sets, and image copies are created.

---

### QUESTION 2

Which three functions are performed by the SQL Tuning Advisor?

- A. Building and implementing SQL profiles
- B. Recommending the optimization of materialized views
- C. Checking query objects for missing and stale statistics
- D. Recommending bitmap, function-based, and B-tree indexes
- E. Recommending the restructuring of SQL queries that are using bad plans

Correct Answer: ACE

The SQL Tuning Advisor takes one or more SQL statements as an input and invokes the Automatic Tuning Optimizer to perform SQL tuning on the statements. The output of the SQL Tuning Advisor is in the form of an advice or recommendations, along with a rationale for each recommendation and its expected benefit. The recommendation relates to collection of statistics on objects (C), creation of new indexes, restructuring of the SQL statement (E), or creation of a SQL profile (A). You can choose to accept the recommendation to complete the tuning of the SQL statements.

---

**QUESTION 3**

Examine the portion of this Active Session History (ASH) report that is marked with a red rectangle: Which two inferences can be drawn from the report?

### Activity Over Time

- ◆ Analysis period is divided into smaller time slots
- ◆ Top 3 events are reported in each of those slots
- ◆ 'Slot Count' shows the number of ASH samples in that slot
- ◆ 'Event Count' shows the number of ASH samples waiting for that event in that slot
- ◆ '% Event' is 'Event Count' over all ASH samples in the analysis period

Slot Time (Duration)	Slot Count	Event	Event Count	% Event
17:13:00(1:0 min)	6	CPU + Wait for CPU	6	0,25
17:14:00(1:0 min)	834	buffer busy waits	590	24,67
		CPU + Wait for CPU	32	1,34
		log file sync	7	0,29
17:15:00(1:0 min)	1,752	buffer busy waits	1,623	67,85
		CPU + Wait for CPU	61	2,55
		cursor: pin S	46	1,92

- A. Sessions attempting to modify blocks images in the buffer cache are waiting while other sessions are reading the same block images.
- B. Sessions are waiting to find free buffers in the buffer cache.
- C. Sessions are waiting for writes of modified block images in the buffer cache to complete
- D. Sessions are attempting to read blocks images in the buffer cache are waiting while other sessions are reading the same block images.
- E. Sessions attempting to read blocks images in the buffer cache are waiting while other sessions are modifying the same block images.

Correct Answer: AC

**QUESTION 4**

Which three statements are true about the use of the query result cache? (Choose three.)

- A. Results obtained from a query rewrite to a materialized view may be stored in the query result cache.
- B. Stale results may still be obtained from the query result cache, if the query session's query\_rewrite\_integrity parameter is set to stale\_tolerated.
- C. Results obtained from a join between a table and a view may be stored in the query result cache.

- D. Results from distributed queries are never stored in the query result cache.
- E. Results may not be obtained from the query result cache, when the query\_rewrite\_enabled parameter is set to false.
- F. Results from remote queries may sometimes be stored in the query result cache.

Correct Answer: ABE

---

#### QUESTION 5

Which three operations can be performed as multipartition operations in Oracle Database 12c? (Choose three.)

- A. Merge partitions of a list partitioned table.
- B. Drop partitions of a list partitioned table.
- C. Coalesce partitions of a hash-partitioned global index.
- D. Move partitions of a range-partitioned table.
- E. Rename partitions of a range partitioned table.
- F. Merge partitions of a reference partitioned index.

Correct Answer: ABF

Multipartition maintenance enables adding, dropping, truncate, merge, split operations on multiple partitions.

A: Merge Multiple Partitions:

The new "ALTER TABLE ... MERGE PARTITIONS " help merge multiple partitions or subpartitions with a single statement. When merging multiple partitions, local and global index operations and semantics for inheritance of unspecified physical attributes are the same for merging two partitions.

B: Drop Multiple Partitions:

The new "ALTER TABLE ... DROP PARTITIONS " help drop multiple partitions or subpartitions with a single statement.

Example:

view plaincopy to clipboardprint?

```
SQL> ALTER TABLE Tab_tst1 DROP PARTITIONS
```

```
Tab_tst1_PART5, Tab_tst1_PART6, Tab_tst1_PART7;
```

```
Table altered
```

```
SQL>
```

Restrictions :

You can't drop all partitions of the table.

If the table has a single partition, you will get the error: ORA-14083: cannot drop the only partition of a partitioned.
