## QUESTION 1

You are connected using SQL\* Plus to a multitenant container database (CDB) with SYSDBA privileges and execute the following sequence statements:

```
SQL> CREATE PLUGGABLE DATABASE NEW_PDB ADMIN USER PDB_ADMIN IDENTIFIED BY SECRET;  
Pluggable database created.
```

```
SQL> ALTER PLUGGABLE DATABASE NEW_PDB OPEN;  
Pluggable database altered.
```

```
SQL> ALTER SESSION SET CONTAINER = NEW_PDB;  
Session altered.
```

```
SQL> GRANT CONNECT TO PDB_ADMIN;  
Grant succeeded.
```

```
SQL CONNECT PDB_ADMIN/SECRET@LOCALHOST/NEW_PDB  
Connected.
```

```
SQL> SELECT * FROM SESSION_PRIVS;
```

```
PRIVILEGE
```

```
-----  
CREATE SESSION  
SET CONTAINER
```

```
SQL> ALTER SESSION SET CONTAINER = PDB$SEED;
```

What is the result of the last SET CONTAINER statement and why is it so?

- A. It succeeds because the PDB\_ADMIN user has the required privileges.
- B. It fails because common users are unable to use the SET CONTAINER statement.
- C. It fails because local users are unable to use the SET CONTAINER statement.
- D. It fails because the SET CONTAINER statement cannot be used with PDB\$SEED as the target pluggable database (PDB).

Correct Answer: C

## QUESTION 2

Which three statements are true about RMAN compressed backups?

- A. Media manager compression should not be enabled if compressed backups are being written to tape.
- B. Compressed backups can be written to media only if using proxy copies.
- C. File system compression should be enabled if compressed backups are being written to disk.
- D. Compression creates some performance overhead during backups to tape.
- E. Compression creates some performance overhead during backups to disk.

Correct Answer: BCE

### QUESTION 3

You are the DBA for an Oracle Database 11g Release 1 data warehouse database running on Oracle Linux with little endianness.

You want to plug in a transportable tablespace with a 16K blocksize from an Oracle Database 10g database that is running on a SPARC-based Oracle Solaris system with big endianness.

The data warehouse database has the following parameters set:

```
DB_BLOCK_SIZE=8192
DB_CACHE_SIZE=200M
DB_16K_CACHE_SIZE=0
SHARED_POOL_SIZE=400M
LARGE_POOL_SIZE=32M
JAVA_POOL_SIZE=0
PGA_AGGREGATE_TARGET=1200M
```

The following parameters are not explicitly set:

```
SGA_TARGET
SGA_MAX_SIZE
MEMORY_TARGET
MEMORY_MAX_TARGET
```

What action must you perform on the data warehouse database to prepare it for the transportable tablespace plug in operation?

- A. Do nothing, because Automatic Memory Management will size DB\_16K\_CACHE\_SIZE automatically
- B. Set ALTER SYSTEM SET DB\_CACHE\_SIZE=192M followed by ALTER SYSTEM SET DB\_16K\_CACHE\_SIZE=8M;
- C. Do nothing, because you cannot transport a tablespace between databases with different endian formats.
- D. Do nothing, because Automatic Shared Memory Management will size DB\_16K\_CACHE\_SIZE automatically.
- E. Set ALTER SYSTEM SET DB\_16K\_CACHE\_SIZE=8M and leave other parameters set to their current settings.

Correct Answer: B

### QUESTION 4

You are about to plug a multi-terabyte non-CDB into an existing multitenant container database (CDB).

The characteristics of the non-CDB are as follows: Version: Oracle Database 11g Release 2 (11.2.0.2.0) 64-bit  
Character Set: AL32UTF8 National Character Set: AL16UTF16 O/S: Oracle Linux 6 64-bit

The characteristics of the CDB are as follows: Version: Oracle Database 12c Release 1 64-bit Character Set:  
AL32UTF8 National Character Set: AL16UTF16 O/S: Oracle Linux 6 64-bit

Which technique should you use to minimize down time while plugging this non-CDB into the CDB?

- A. Transportable database
- B. Transportable tablespace
- C. Data Pump full export/import
- D. The DBMS\_PDB package
- E. RMAN

Correct Answer: B

Transportable tablespaces were introduced in Oracle 8i to allow whole tablespaces to be copied between databases in the time it takes to copy the datafiles. It is supported in Oracle 11g. Incorrect Answers:

A: Using Transportable database with the "FULL=Y TRANSPORTABLE=ALWAYS VERSION=12" parameters allows you to plug in an 11.2.0.3 or later non-CDB 11g database, not an 11.2.0.2.0 database.

D: The DBMS\_PDB package allows you to generate an XML metadata file from a non-CDB 12c database. This allows the non-CDB to be plugged in as a PDB into an existing CDB. However, the non-CDB is an 11g (11.2.0.2.0) database.

## QUESTION 5

Your database has the SRV1 service configured for an application that runs on middle-tier application server. The application has multiple modules. You enable tracing at the service level by executing the following command:

```
SQL > exec DBMS_MONITOR.SERV_MOD_ACT_TRACE_ENABLE ('SRV1');
```

The possible outcomes of this command and the actions to aggregate trace files are as follows:

1.

The command fails because a module name is not specified.

2.

A trace file is created for each session that is running the SRV1 service.

3.

An aggregated trace file is created for all the sessions that are running the SRV1 service.

4.

Trace files may be aggregated by using the trcess utility.

5.

Trace files may be aggregated by using the tkprof utility.

Identify the correct outcome and the action to aggregate the trace files.

- A. 1
- B. 2 and 4
- C. 2 and 5
- D. 3 and 4
- E. 3 and 5

Correct Answer: B

Tracing information is present in multiple trace files and you must use the trcess tool to collect it into a single file.

Note:

\*

The procedure enables a trace for a given combination of Service, MODULE and ACTION name. The specification is strictly hierarchical: Service Name or Service Name/MODULE, or Service Name, MODULE, and ACTION name must be specified. Omitting a qualifier behaves like a wild-card, so that not specifying an ACTION means all ACTIONS. Using the ALL\_ACTIONS constant achieves the same purpose.

\*

SERV\_MOD\_ACT\_TRACE\_ENABLE Procedure

This procedure will enable SQL tracing for a given combination of Service Name, MODULE and ACTION globally unless an instance\_name is specified.

\*

```
DBMS_MONITOR.SERV_MOD_ACT_TRACE_ENABLE(  
service_name IN VARCHAR2,  
module_name IN VARCHAR2 DEFAULT ANY_MODULE,  
action_name IN VARCHAR2 DEFAULT ANY_ACTION,  
waits IN BOOLEAN DEFAULT TRUE,  
binds IN BOOLEAN DEFAULT FALSE,  
instance_name IN VARCHAR2 DEFAULT NULL);
```
