QUESTION 1

Which two activities are typically performed during the service implementation and configuration phase of the SOA lifecycle?

- A. Capabilities are evaluated and prioritized based on business models and ROI.
- B. Oracle Enterprise Repository promotes services and harvested endpoints to the service registry.
- C. Developers find and reuse services to help them complete development.
- D. Developers use harvesting tools to submit their completed implementations to Oracle Enterprise Repository.

Correct Answer: CD

Implementation and Configuration

As capabilities are funded, projects are established to implement the capability. SOA Suite developers working in JDeveloper can see and reuse services from the enterprise repository to complete their projects. Service Bus developers working in Eclipse can see and reuse services from the enterprise repository to complete their projects (C). Developers can also harvest their completed implementations directly to the Enterprise Repository (D). The Enterprise repository also supports VS .Net development.

QUESTION 2

Which statement best describes deploying your SOA application to a cluster?

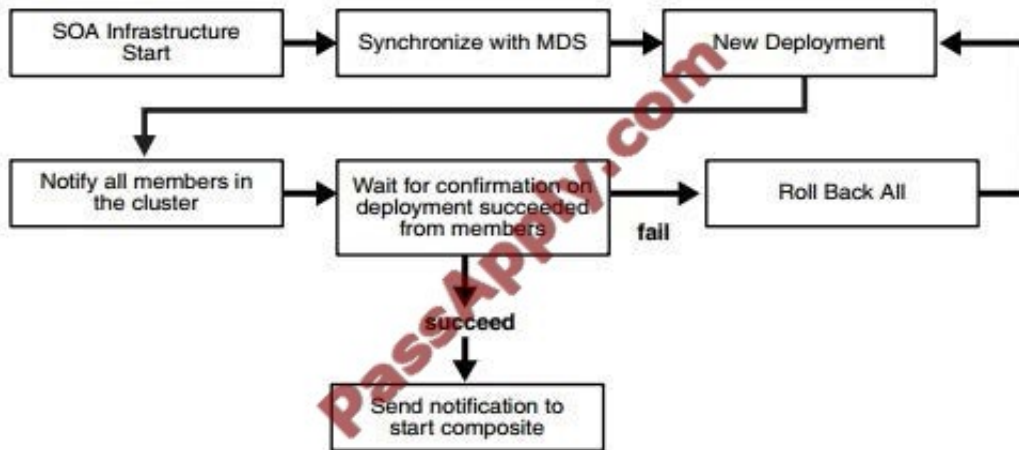

- A. Manually deploy the application to each managed server in the cluster.
- B. After deployment, restart each managed server in the cluster before the application is available for service.
- C. Use WebLogic Server Administration Console for deployment because you cannot deploy to a cluster from JDeveloper.
- D. Treat your cluster as a single deployment target and let the administration server automatically deploy the application to all managed servers in the cluster.

Correct Answer: D

Note:

* Oracle SOA Service Infrastructure Cluster-Wide Deployment Composite deployments are stored centrally by the SOA Service Infrastructure in the MDS repository. Each time the SOA Service Infrastructure is started, it synchronizes itself with the MDS repository and SOA store to get the deployment and process state. The deployment coordinator infrastructure orchestrates the notifications for composites deployments and updates. When a new deployment or update takes place, deployment coordinator notifies all members in the cluster. When all members in the cluster confirm that the deployment has succeeded, the master sends a notification to start the composite. If a deployment fails on any one of the nodes, it is rolled back to the rest of the cluster

* Figure: Cluster-Wide Deployment of Oracle SOA Composites

QUESTION 3

Identify two features of Oracle BAM.

- A. Enterprise Manager's monitoring capabilities are central to Oracle BAM's ability to monitor performance indicators.
- B. You can analyze and present Information from activities spanning multiple systems and applications.
- C. Rich browser-based dashboards provide visibility into current values of key performance indicators (KPIs).
- D. There is a built-in trouble ticket system to track assignment and completion of corrective actions.

Correct Answer: AC

Note:

* Oracle Business Activity Monitoring (Oracle BAM) gives business executives the ability to monitor their business services and processes in the enterprise, to correlate KPIs down to the actual business process themselves, and most important, to change business processes quickly or to take corrective action if the business environment changes.

QUESTION 4

Identify two service components that can be added to the components section of the SOA Composite Editor.

- A. Database adapter
- B. BPEL process
- C. File adapter
- D. Business rule
- E. ADF-BC service

Correct Answer: BD

QUESTION 5

You want to leverage the Event Delivery Network (EDN) in your composite application for publishing and subscription.

Which two components do you use?

- A. Business rule
- B. Mediator
- C. BAM adapter
- D. Spring component
- E. BPEL process

Correct Answer: BE

B: Example:

Subscribing to the NewPO event

1.

Drag-and-drop a Mediator component on to the composite.

2.

Name the mediator receiveNewPO.

3.

Select Subscribe to Events for the Template.

4.

Click on the + to add an event. Select the NewPO event from the Event Chooser window.

5.

Click on OK to accept and create the mediator.

6.

Save all.

7.

Connect the receiveNewPO mediator to the routePO mediator:

Etc.

E: It is possible to subscribe to or publishing a Business Event from a BPEL Process Service Component

Note:

* The Event Delivery Network (EDN) in Oracle SOA Suite 11g provides a declarative way to use a publish/ subscribe

model to generate and consume business events without worrying about the underlying message infrastructure.
