### QUESTION 1

Which two items can only be created in the ATG Control Center (ACC)?

- A. User profiles, roles, and organizations
- B. Content items
- C. Scenarios and slots
- D. Content Groups
- E. Content Targeters
- F. Workflows

Correct Answer: CF

Note: When you start the ATG Control Center, the following screen appears:

### QUESTION 2

What would be the Ground and Expedited shipping prices for an order of a single item with a price of 15.99 and having a weight of 42 with this configuration (assume no active shipping promotions)?

/atg/commerce/pricing/shippingPricingEngine.Properties:

PreCalculators =\

Calculators/GroundshippingCalculator,\

Calculator/ExpeditedShippingCalculator

postCalculators=calculators/MyPostCalculator

/atg/commerce/pricing/calculators/GrowthShippingCalculators.properties:

\$class=atg.commerce.pricing.priceRangeShippingCalculator ignoreShippingMethod=false

shippingmethod=Ground

ranges =\

00.00:15.99:4.50,\

16.00:30.99:6.00,\

31.00:40.99:7.25,\

41.00:MAX\_VALUE:10.00

/atg/commerce/pricing/calculators/ExpeditedShippingCalculators.properties:

```
$class=atg.commerce.pricing.priceRangeShippingCalculator ignoreShippingMethod=false
```

```
shippingmethod=Expedited
```

```
ranges =\
```

```
00.00:15.99:4.50,\
```

```
16.00:30.99:6.00,\
```

```
31.00:40.99:7.25,\
```

```
41.00:MAX_VALUE:10.00
```

```
/atg/commerce/pricing/calculators/MyPostCalculators.properties:
```

```
$class=atg.commerce.pricing.FixedPriceShippingCalculator AddAmount=true
```

```
ignoreShippingMethod=true
```

```
shippingmethod=SpecialSurcharge
```

```
amount=4.99
```

A. Ground: 4.50, Expedited: 10.00

B. Ground: 10.00, Expedited: 10.00

C. Ground: 4.99, Expedited: 4.99

D. Ground: 9.49, Expedited: 14.99

Correct Answer: D

For Ground the calculation is 4.50 (Price range is used) + 4.99 (the post calculator always gives this result) -> 9.49

For Expedited the calculation is 10.00 (Weight range is used) + 4.99 (the post calculator always gives this result) -> 14.99

Note 1: A ShippingPricingEngine implementation which computes the shipping price for an order. It accomplishes this task by invoking a series of ShippingPricingCalculators which incrementally compute the tax price:

The first step is to allow the preCalculators to manipulate the price. They are invoked in the order in which they appear in the preCalculators list.

The second step is to extract the calculators from any input PricingModels, and invoke them in the order in which they appear in the pPricingModels list.

The last step is to invoke the postCalculators in the order in which they appear in the postCalculators list.

Note 2: The ShippingPricingEngine is a structural component that does not actually calculate shipping prices itself. The actual price calculations are performed by the Pricing Calculator components that are configured as the preCalculators

and postCalculators properties of the ShippingPricingEngine.

### QUESTION 3

How many current and saved orders does ATG allow a user profile to have?

- A. ATG allows one current order and one saved order per user profile.
- B. ATG allows one current order and a collection of saved orders per user profile.
- C. ATG allows multiple current orders and a collection of saved orders per user profile.
- D. Only one order can exist for a Give user profile in ATG. There is no support for saved orders.

Correct Answer: B

Note: loadShoppingCarts

public void loadShoppingCarts(RepositoryItem pProfile,

OrderHolder pShoppingCart)

throws CommerceException

Parameters:

pProfile - the user profile

pShoppingCart - the OrderHolder component for this user Throws:

CommerceException - is any errors occur while loading the shopping carts

This method finds all the shopping carts for the user and places them into the session-scope OrderHolder component. "Shopping Carts" are defined to be orders whose state is INCOMPLETE. The orders are sorted by last activity date, and

the last order touched is made the current order. This method will optionally merge the current shopping cart for the session (from the OrderHolder.current property) with the first persistent order loaded from the database. This functionality is

toggeled through the mergeOrders property of this form handler. NOTE: This method used to acquire a transaction lock, but we\\'ve found deadlock issues and have decided to remove the locks. See bug 146012. This method now performs its

actions without a lock.

---

### QUESTION 4

Identify the significance of using cascade="insert" from the snippet below:

- A. An item of type articles is created once a new user is created.

- B. If a user is deleted, all items in articles of that user are deleted.
- C. insert is ignored for properties that use the attribute component item-type.
- D. An article named favoriteArticles is created.

Correct Answer: C

The cascade="insert" attribute is ignored for properties that use component-item-type.

Note: Cascade Insert

If a repository item has a property with the item-type attribute and the cascade="insert" attribute set, on item creation:

A new item of the type declared by the item-type attribute is also created.

The property is set to point to the other item created.

The cascade="insert" attribute is typically used with cascade="update" and cascade="delete" so management of this item is completely automatic. The item is created, added, updated, and deleted along with the parent item. The cascade="insert" attribute is ignored for properties that use component-item-type.

---

## QUESTION 5

Identify two ways in which Nucleus components can be configured.

- A. using the JMX console of the application server
- B. using the BCC
- C. manually editing the properties files
- D. using the Dynamo Administration UI at /dyn/admin
- E. using the ATG Component Configuration Helper Utility
- F. using an XML editor

Correct Answer: CE

The application developer creates the slot as a Nucleus component. He or she can do this in three ways:

by writing a .properties file; by using the Component Editor in the ATG Control Center; or by using the Scenarios > Slots window in the ATG Control Center.
