QUESTION 1

You have the following analysis requirement. Products roll up to Product Family which rolls up to Product Category. You also need to group Products by Product Manager. Product Managers may manage one or more Products across product families. You do not need to create reports with Product Manager by Product Family. You need to secure products by Product Manager for planning submissions.

You consider Shared members as a solution because of which two options?

- A. Shared members provide cross tab reporting (Product Manager in the rows and Product Family across the column)
- B. Shared members provide additional categorization but results in a smaller database then if you were to add Product Manager as a separate dimension
- C. You can assign security to shared members
- D. Shared members can be assigned to sparse members only

Correct Answer: BC

The data values associated with a shared member come from another member with the same name. The shared member stores a pointer to data contained in the other member, and the data is stored only once. To define a member as shared, an actual nonshared member of the same name must exist. Using shared members lets you use members repeatedly throughout a dimension. Essbase stores the data value only once, but it displays in multiple locations. Storing the data value only once saves space and improves processing efficiency. (B) Shared members must be in the same dimension. Data can be shared by multiple members.

QUESTION 2

Identify the true statement about the data cache.

- A. Data cache contains compressed data blocks
- B. Data cache contains uncompressed data blocks
- C. Data cache contains compressed index entries
- D. Data cache contains uncompressed index entries

Correct Answer: B

The Data Cache is a buffer in memory that holds uncompressed data blocks. Essbase allocates memory to the data cache during data load, calculation, and retrieval operations, as needed.

Note: there are four other caches as well, including the index cache.

QUESTION 3

You need to track and report the Store Close Date for all of the stores in your company in your block storage option database. Store close date will vary by store over time. Which three solutions would allow you to do this?

- A. Attribute dimension based on Store
- B. Varying attribute dimension with an Independent dimension of Time where Time contains both the Years and Months in the same dimension
- C. Varying attribute with 2 Independent dimensions, Periods and Fiscal Year
- D. Measure called Store Close Date with a data type of date
- E. User Defined attribute Store Close Date assigned to each store

Correct Answer: ACE

QUESTION 4

Identify the two true statements about data loads to ASO and BSO databases.

- A. Data can only be loaded to level 0 members in ASO database where BSO allows data loads to upper level members.
- B. Cells at all levels can be loaded (except Dynamic Calc members) for both ASO and BSO.
- C. After an ASO data load, no further calculation is required.
- D. Concurrent loads are supported for both ASO and BSO

Correct Answer: AC

A: ASO targets can be partitioned only along level 0

QUESTION 5

Which three options will clear query tracking results in ASO?

- A. Materialize views
- B. Clear the data in the database
- C. Stop the application
- D. Turn off
- E. Change an outline

Correct Answer: ACD

Query tracking data is lost when you load additional cells, materialize any views, or shut down the application.
