**QUESTION 1**

Given the code fragment:

```
public class Test {
    public static List data = new ArrayList();

    // insert code here
    {
        for (String x : str) {
            data.add(x);
        }
        return data;
    }

    public static void main(String[] args) {
        String[] str = {"a", "b", "c"};
        update(str);
        for (String s : data) {
            System.out.print(s + " ");
        }
    }
}
```

Which code fragment, when inserted at // insert code here, enables the code to compile and print a b c?

- A. List update (String[] str)
- B. Static ArrayList update (String [] str)
- C. Static List update (String [] str)
- D. Static void update (String[] str)
- E. ArrayList static update (String [] str)

Correct Answer: E

QUESTION 2

Given: What is the result?

```
public class SampleClass {
    public static void main(String[] args){
        SampleClass sc, scA, scB;
        sc = new SampleClass();
        scA = new SampleClassA();
        scB = new SampleClassB();
        System.out.println("Hash is : " +
            sc.getHash() + ", " + scA.getHash() + ", " + scB.getHash());
    }
    public int getHash() {
        return 111111;
    }
}
class SampleClassA extends SampleClass {
    public long getHash() {
        return 444444444;
    }
}
class SampleClassB extends SampleClass {
    public long getHash() {
        return 999999999;
    }
}
```

- A. Compilation fails
- B. An exception is thrown at runtime
- C. There is no result because this is not correct way to determine the hash code
- D. Hash is: 111111, 444444444, 999999999

Correct Answer: A

The compilation fails as SampleClassA and SampleClassB cannot override SampleClass because the return type of SampleClass is int, while the return type of SampleClassA and SampleClassB is long.

Note: If all three classes had the same return type the output would be: Hash is : 111111, 444444444, 999999999

QUESTION 3

Given: How many objects have been created when the line // do complex stuff is reached?

Given:

```
class Dog {
    Dog() {
        try {
            throw new Exception();
        } catch (Exception e) { }
    }
}

class Test {
    public static void main(String[] args ) {
        Dog d1 = new Dog();
        Dog d2 = new Dog();
        Dog d3 = d2;
        // do complex stuff
    }
}
```

- A. Two
- B. Three
- C. Four
- D. Six

Correct Answer: C

QUESTION 4

Given:

```
public class Natural {
    private int i;
    void disp() {
    while (i
```
