### QUESTION 1

Which two statements describe the contact between an Enterprise JavaBeans (EJB) container and the EJBs that it hosts?

- A. The container provides automatic logging of all exceptions and errors generated by EJB code.
- B. The container provides a transparent scaling mechanism to handle spikes in demand.
- C. An EJB can extend its services, such as security, to improve performance.
- D. The container has a well defined lifecycle model for each EJB type.

Correct Answer: BD

---

### QUESTION 2

A manufacturing company has a large investment in a legacy Inventory Management System (IMS) developed with third-party technologies. You have been asked to design a Java EE application that interacts with it.

You would like to ensure the following:

Minimal application code is required to parse the communication messages.

Communication is asynchronous and stateless.

Performance impact of the existing system is minimal.

100% Real QandAs | 100% Real Pass

Which two technologies combined would meet these requirements?

- A. XML
- B. JSON
- C. RMI
- D. JAX-RS
- E. JAX-WS

Correct Answer: BD

---

### QUESTION 3

A company must honor a service-level agreement (SLA) for its application, which states all database requests must execute within three seconds.

100% Real QandAs | 100% Real Pass

Users complain that some requests take longer than five seconds to complete. You have been contracted to fix the problem.

Which course of action do you recommend?

- A. Modify the program to implement multi threading and an event-driven design.
- B. Add servers to distribute the load.
- C. Upgrade the application server and the operating system.
- D. Define a plan for isolating the bottleneck, and define indicators that will measure performance under a test load.

Correct Answer: D

---

#### QUESTION 4

Which two statements are true about the timer service of a business component container?

- A. Timed notifications for all types of session beans can be scheduled by using this service.
- B. When the server is shut down, the timer is persisted automatically and becomes active again when the server is restarted.
- C. Each instance of message driven beans has unique timers.
- D. When stateful session bean instance is removed, the container detaches the timers associated with the instance and allocates them to the new instance.
- E. When a transaction is rolled hark, the timer creation within the transaction is also rolled back.

Correct Answer: BE

---

#### QUESTION 5

Blue Berry Corporation, one of the biggest fruit traders in Canada, has the biggest competitor, Red Cherry

100% Real QandAs | 100% Real Pass Corporation. Blue Berry uses a web application that is developed by using java technologies, whereas Red Cherry\'\'s web application uses non-Java technologies. Blue Berry plans to share business sensitive, transactional data between the two systems by integrating them in a loosely coupled manner.

Which technology should be used to this?

- A. JMS
- B. JCA
- C. XML over HTTPS
- D. RMI over IIOP
- E. JBI

Correct Answer: CE
