-  **800,000+** Satisfied Customers

QUESTION 1

You have a server that has two zones configured. These zones use the pool named pool_zones. Examine the following configuration information:

```
root@sol11-server:~# poolcfg -c info
...
pool pool_zones
  int          pool.sys_id 1
  boolean      pool.active true
  boolean      pool.default false
  string pool.scheduler FFS
  int          pool.importance 1
  string pool.comment
  pset         pset_zones
...
pset pset_zones
  int          pset.sys_id 1
  boolean      pset.default false
  uint         pset.min 2
  uint         pset.max 2
  string pset.units population
  uint         pset.load 0
  uint         pset.size 0
  string pset.comment
...

root@sol11-server:~# prctl -n zone.cpu-shares -i zone z1
zone: 5: z1
NAME      PRIVILEGE      VALUE      FLAG      ACTION      RECIPIENT
zone.cpu-shares
  usage          40
  privileged     40          -         none
  system        65.5K       max       none
```

The system has four CPUs. Assume that both zones are under heavy load. Examine the following partial output:

```
root@sol11-server:~# prstat -Z
...
ZONEID  NPROC  SWAP  RSS  MEMORY  TIME  CPU  ZONE
0       109    2583M 742M 16%     0:17:42 2.5% global
5       16     94M   961M 22.2%   0:01:15 xxx% z1
4       29     126M  865M 41.9%   0:00:27 xxx% z2
```

Which option describes the values you would expect to see for the CPU field for the zones?

- A. approximately 40% for z1 and approximately 60% for z2
- B. approximately 60% for z1 and approximately 40% for z2
- C. approximately 20% for z1 and approximately 30% for z2
- D. approximately 30% for z1 and approximately 20% for z2
- E. approximately 25% for z1 and approximately 25% for z2

Correct Answer: A

QUESTION 2

You created a virtual network of three zones.

One network hosts a web server.

Another hosts an application server used by the web server.

The third zone host a video streaming application.

You already configured a flow to prioritize the video traffic over the web server traffic. You now need to continuously monitor the flow.

Which tool must you use to gather the flow data?

- A. the system activity reporter (SAR)
- B. extended accounting
- C. the flowstat command
- D. the kstat utility

Correct Answer: A

QUESTION 3

Consider the following ZFS configuration:

```
NAME                                USED AVAIL REFER MOUNTPOINT
rpool/export                        436M 9.21G 284M /export
rpool/export/home                    152M 9.21G 35K /export/home
rpool/export/home/curly              35K 9.21G 35K /export/home/curly
```

You have created snapshots of the homo directories which are as follows:

```
NAME                                USED AVAIL REFER MOUNTPOINT
rpool/export/home@11.28.12          0 - 32K -
rpool/export/home/curly@11.28.12   0 - 802K -
```

You have another storage pool named bpool on the same system. You use the following command to store the snapshots in this pool:

```
# zfs send rpool/export/home@11.28.12 | zfs recv f bpool@11.28.12
```

What will be created in the pool bpool as a result of this operation?

- A. bpool/export/home/ bpool/export/home/curly
- B. bpool/export/home/ bpool/export/home/curly bpool/export/home@12.25.11

- C. bpool/export/home/ bpool/export/home/curly bpool@12.25.11
- D. bpool/curly bpool/curly@12.25.11
- E. bpool/curly
- F. bpool/curly bpool@12.25.11

Correct Answer: A

QUESTION 4

Which two conditions must exist in order to add a new link to an aggregation?

- A. The new link appears in the output of `dladm show-phys`.
- B. The new link may already support an active interface.
- C. The LACP policy must be set to L4.
- D. The link may currently be in any state.
- E. The new link has the same MAC address as the existing links.

Correct Answer: AD

QUESTION 5

Consider the following command:

```
zonestat q r physical-memory R high z dbzone p p "zones" 10 24h 60m
```

What data will this command report?

- A. The dbzone's physical memory usage every hour for a day, displaying the 10 higher usage intervals for each hour.
- B. All the dbzone's resource usage, excluding physical memory, 10 times an hour for a day.
- C. The dbzone's CPU, virtual memory, and networking utilization every hour for a day, displaying top 10 usage intervals.
- D. The dbzone's memory and CPU utilization every 10 seconds for a day, displaying peak usage each hour.
- E. The dbzone's physical memory usage every 10 seconds for a day. displaying peak usage each hour.

Correct Answer: D
