QUESTION 1

A developer is working on a user registration application using EJB 3.0. A business method registerUser in stateless session bean RegistrationBean performs the user registration. The registerUser method executes in a transaction context started by the client. If some invalid user data causes the registration to fail, the client invokes registerUser again with corrected data using the same transaction. Which design can meet this requirement?

- A. Have registerUser method call EJBContext.setRollbackOnly() after registration fails.
- B. Have registerUser method throw javax.ejb.EJBTransactionRequiredException after registration fails.
- C. Have registerUser method throw EJBException without marking the transaction for rollback, after registration fails.
- D. Create an application exception with the rollback attribute set to false and have registerUser method throw it after registration fails.

Correct Answer: D

QUESTION 2

A session bean's business method throws an exception during execution. Which two are responsibilities of the Bean Provider when throwing the exception? (Choose two.)

- A. For application exceptions, ensure that if the current transaction commits there will be no loss of data integrity.
- B. For application exceptions, ensure that the current transaction will commit.
- C. For system errors, when the client is remote, throw a java.rmi.RemoteException that wraps the original exception.
- D. For checked exceptions from which the bean cannot recover, throw an EJBException that wraps the original exception.

Correct Answer: AD

QUESTION 3

A User entity is in a one-to-many relationship with a Book entity. A developer writes a query to delete users that have a first name of Fred or 'Ginger', and writes the following Java Persistence query language statement: DELETE FROM User u WHERE u.name IN (Fred, 'Ginger') If the query fails with a PersistenceException, what can be the cause?

- A. The syntax of the query is NOT correct.
- B. The query causes a foreign key integrity constraint to be violated.
- C. The database does NOT have any users with the name Fred or 'Ginger'.
- D. The entities corresponding to the users with the name Fred or 'Ginger' are already being managed by the persistence context.

Correct Answer: B

QUESTION 4

A session bean's business method throws an exception during execution. Which two are responsibilities of the Bean Provider when throwing the exception? (Choose two.)

- A. For application exceptions, ensure that if the current transaction commits there will be no loss of data integrity.
- B. For application exceptions, ensure that the current transaction will commit.
- C. For system errors, when the client is remote, throw a `java.rmi.RemoteException` that wraps the original exception.
- D. For checked exceptions from which the bean cannot recover, throw an `EJBException` that wraps the original exception.

Correct Answer: AD

QUESTION 5

FooBean is an EJB 3.0 session bean that can make valid use of `UserTransaction`. Which is guaranteed to work in an EJB container for FooBean to obtain the `UserTransaction` object?

- A. Invoke a method on a `SessionContext` that returns a `UserTransaction` object.
- B. Perform JNDI lookup with name `"java:/UserTransaction"` on an `InitialContext`.
- C. Perform JNDI lookup with the name `"jdbc/UserTransaction"` on an `InitialContext`.
- D. Use the `@TransactionManagement` annotation to inject an instance variable of type `UserTransaction` in a bean class.

Correct Answer: A
