QUESTION 1

Which statement about entity manager is true?

- A. A container-managed entity manager must be a JTA entity manager.
- B. An entity manager injected into session beans can use either JTA or resource-local transaction control.
- C. An entity manager created by calling the EntityManagerFactory.createEntityManager method always uses JTA transaction control.
- D. An entity manager obtained through resource injection in a stateful session bean can use a resource-local EntityTransaction for transaction control

Correct Answer: A

QUESTION 2

A developer is implementing an EJB 3.0 message-driven bean that will be associated with a JMS topic. The bean must NOT miss any messages published to the topic, even if the EJB server is down for some time. Which is correct?

- A. The developer should set the activation config property subscriptionDurability to value Durable.
- B. The developer should set the activation config property subscriptionDurability to value NonDurable.
- C. Clients must take care of resending messages to the topic in case of missing message acknowledgements.
- D. The developer does NOT need to do anything, because as long as the EJB server is down no client can publish messages to the topic.

Correct Answer: A

QUESTION 3

Using bean-managed transaction demarcation, under which two circumstances must the container roll back a transaction? (Choose two.)

- A. A stateful session bean invokes UserTransaction.getRollbackOnly.
- B. A stateful session bean throws an uncaught application exception from a business method.
- C. A stateful session bean begins a transaction in a business method but does NOT complete it before returning.
- D. A stateless session bean begins a transaction in a business method but does NOT complete it before returning.
- E. A message-driven bean begins a transaction in a message listener method but does NOT complete it before returning.

Correct Answer: DE

QUESTION 4

The Java Persistent API defines certain rules for persistent entities. These rules are required by the persistent provider to manage entities at runtime. Which statement is correct, assuming NO mapping descriptor is used?

- A. Entities must extend a persistent base class.
- B. Entities must implement the interface `PersistentEntity` to be managed by the persistent provider.
- C. A field without a transient modifier must be annotated as `@Persistent` to be stored in the database.
- D. A field without a transient modifier must be annotated as `@Transient` to NOT be stored in the database.

Correct Answer: D

QUESTION 5

A developer writes a stateless session bean `FooBean` with one remote business interface `FooRemote` containing one business method `foo`. Method `foo` takes a single parameter of application-defined type `MyData`.

11.

```
public class MyData implements java.io.Serializable {
```

12.

```
int a; 13.}
```

Method `foo` is implemented within the `FooBean` class as:

11.

```
public void foo(MyData data) {
```

12.

```
data.a = 2; 13.}
```

Another session bean within the same application has a reference to `FooRemote` in variable `fooRef` and calls method `foo` with the following code:

11.

```
MyData data = new MyData();
```

12.

```
data.a = 1;
```

13.

```
fooRef.foo(data);
```

14.

```
System.out.println(data.a);
```

What is the value of data.a when control reaches Line 14 of the client ?

A. 0

B. 1

C. 2

D. either 1 or 2

Correct Answer: B
