QUESTION 1

Given the Java fragment and schema:

1.

```
//-- Java code fragment
```

2.

```
public class PurchaseOrder{
```

3.

```
public javax.xml.datatype.XMLGregorianCalendar orderDate;
```

4.

```
}
```

5.

```
//-- Schema fragment
```

6.

7.

8.

10.

11.

Which two statements are true about .Net and WCF interoperability for this data? (Choose two.)

- A. The GregorianCalendar maps to an equivalent date type in both Java and .Net.
- B. .Net will generate code with the calendar as a string that functions as well as a date.
- C. .Net will generate code with the calendar as a string that is not type equivalent.
- D. Use of the `@XmlSchemaType` annotation causes .Net to properly map to a date.
- E. Casting in the case of WSIT services is an effective approach for the WCF client.

Correct Answer: CD

QUESTION 2

A company is building a Java EE 5 purchase order processing system. This system will integrate with an external invoicing system as part of the purchase order approval process. A developer created a new client application to access the invoicing system using request-response, but a new service call is receiving errors every time it invokes the necessary Web service.

Which statement is true about the Body element of the SOAP reply message?

- A. It must NOT contain any fault elements.
- B. It will contain a fault element for each error.
- C. It will contain exactly one fault element.
- D. It must contain zero or one fault element.
- E. It must contain an array of fault elements.

Correct Answer: D

QUESTION 3

Place the general steps in the JAXB data binding process in the correct order.

- a.
compile classes
- b.
generate classes
- c.
generate content tree
- d.
marshall
- e.
process content
- f.
unmarshall

g.

validate

A.

f,b,a,c,g,e,d

B.

b,a,d,c,g,e,f

C.

b,a,f,c,g,e,d

D.

b,a,d,c,e,f,g

E.

f,c,a,b,g,e,d

Correct Answer: C

QUESTION 4

An enterprise has a requirement to create a Web service to accept purchase orders. The order data contains some authorization information that is specific to each order (such as, who can access which parts of the order).

Keeping in mind future enhancements in types of orders that the enterprise needs to accept, which two design solutions provide the most flexibility? (Choose two .)

- A. a Web service interface with one method per accepted XML document type for a purchase order
- B. a procedure-style Web service method that lists all data elements and all possible access control options.
- C. a document-style Web service method that accepts all types of XML documents representing purchase orders.
- D. a Web service interface with one method for each combination of data elements and the access control options.

Correct Answer: AC

QUESTION 5

A developer new to Web services is researching how a client can connect to a service. It is clear that some models provide better abstraction while others offer more power when working with messages. What is the correct reason to choose the Dispatch interface?

- A. Dispatch is a high-level API that helps hide the complexity of XML.

- B. REST services can be consumed with the Dispatch API and XML/HTTP bindings.
- C. The Dispatch interface supports the use JAXP to bind data.
- D. The Dispatch interface is represented internally as a SOAP message.

Correct Answer: B
