### QUESTION 1

A developer who recently added message optimization support to the company's Web services is tasked with explaining how the next crop of WSIT client applications will use the feature. Which statement is true?

- A. Client developers should have experience with the SAAJ and MIME types to use MTOM with the service.
- B. The clients should use the service WSDL to discover and satisfy the interoperability requirements.
- C. Adding message optimization is a manual step when the WSDL is available on HTTPS.
- D. The encryption for optimization requires a client keystore.

Correct Answer: B

---

### QUESTION 2

Which statement is true about JAX-WS dynamic invocation?

- A. Dynamic invocation clients use RPC typed interfaces to invoke the Web service.
- B. Dynamic invocation lets clients access a Web service without a WSDL.
- C. Dynamic invocation clients are bound at design-time to a single Web service.
- D. Dynamic invocation requires the client to statically configure the Web service proxy.
- E. The dynamic proxies provide dynamic invocation in JAX-WS.

Correct Answer: B

---

### QUESTION 3

Which two implementations of JSON Web services benefit from the inherent structure of JSON messages? (Choose two.)

- A. remote procedure calls
- B. geocoding
- C. Enterprise Service Bus messaging
- D. map image
- E. stateful session management

Correct Answer: BD

---

### QUESTION 4

Which two statements are true about Java clients that use a security token service (STS) supported by the security features of WSIT? (Choose two.)

- A. The client only requires a keystore.
- B. STS requires a default user name configuration.
- C. Using an STS-issued token requires a keystore and a truststore.
- D. HTTPS must be configured.
- E. An authorized client receives a token digitally signed by the STS.

Correct Answer: CE

---

#### QUESTION 5

A developer is given a WSDL for an existing Web service. What is the correct sequence of steps that must be taken to use that Web service?

- A. parse the WSDL using JAXP, connect to the service using RMI, and then parse the XML using SAX
- B. use a utility (such as wsimport) to read the WSDL and generate a service endpoint interface
- C. register the WSDL with wsgen, bind to the stubs, and then call methods on the interface
- D. receive the service using RMI, parse the XML using JAXP, create Java objects using JAXR, and then return those Java objects

Correct Answer: B
