-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Where is the data stored for a table that is defined as using the FEDERATED Storage Engine?

- A. The data will always be stored on the local host.
- B. The data will always be stored on a remote host.
- C. The data can be stored on any host depending on the definition of the table.
- D. The data will always be stored on disk.
- E. The data will always be stored in memory.
- F. The data will be stored according to the storage engine of the referenced table.

Correct Answer: C

29.6. The FEDERATED Engine

"Remote" in the preceding discussion actually is not quite accurate: FEDERATED tables can be defined for accessing tables from other servers running on the same host, or even other tables from the same server.

QUESTION 2

When working with InnoDB, which of the following is true when trying to create foreign key references?

- A. Only the child column must be indexed.
- B. Only the parent column must be indexed.
- C. Both the parent and child columns must be indexed.
- D. InnoDB will not create an index automatically.
- E. InnoDB may create an index automatically.

Correct Answer: CE

29.4.6. Using Foreign Keys

In a foreign key relationship, the referring column and the referenced column should have the same data type, and both must be indexed. (If the referring column has no index, InnoDB creates an index on it automatically.)

QUESTION 3

Which of the following best describe a replication setup with regard to backup procedures?

- A. 24 by 7 operations can be maintained but backups may not consist of a full snapshot
- B. 24 by 7 operations can be maintained but may be halted at backup time.

- C. 24 by 7 operations can be maintained without interruptions.
- D. 24 by 7 operations can be maintained with backups from a slave server.
- E. 24 by 7 operations can be maintained with a slave being the "hot spare".
- F. none of the above.

Correct Answer: CDE

32.6. Replication as an Aid to Backup

The advantage of making a backup this way is that it doesn't take place on the master server. Thus, the master need not be interrupted at all, and the backup procedure does not impose any extra disk or processing load on it.

QUESTION 4

When working with InnoDB, which of the following are true of a parent / child foreign key relationship?

- A. The parent and child can have separate data types.
- B. The parent and child must have the same data type.
- C. The parent and child may sometimes need the same data type, but not always.

Correct Answer: B

29.4.6. Using Foreign Keys

In a foreign key relationship, the referring column and the referenced column should have the same data type, and both must be indexed. (If the referring column has no index, InnoDB creates an index on it automatically.)

QUESTION 5

Besides specifying the column names and data types, which connection parameters may be defined when defining a FEDERATED table?

- A. The name and database of the referenced table
- B. The host name of the server where the referenced table is located
- C. The user name and password to be used to connect the remote server
- D. The compression method to be used
- E. The operating system of the remote server

Correct Answer: ABC

29.6. The FEDERATED Engine

Connection string format is as follows, where optional parts are shown in square brackets:

mysql://user_name[:password]@host_name[:port]/db_name/table_name The username, password, hostname, and port number specify what connection parameters to use for connecting to the remote server. The database and table names indicate which table to access on that server.
