QUESTION 1

Which of the following best describes how the binary log might be helpful in query optimization?

- A. By checking which queries it logs as slow.
- B. By checking the processor load it records when a query is executed.
- C. By identifying the WHERE clauses in queries for which indexes might be useful.

Correct Answer: C

QUESTION 2

Which of the following steps are used to create database symbolic links on Windows?

- A. Stop the server.
- B. Restart the server.
- C. Use the ln -s command.
- D. Update your my.ini with the path to the new location.
- E. Move the database directory from the data directory to a new location.
- F. Create a file in the data directory with the database name with an extension of .sym that contains the full path to the new location.

Correct Answer: F

QUESTION 3

What kind of replication is supported by the MySQL server?

- A. Multiple-master replication
- B. Master to slave replication
- C. Single file based clustering
- D. MySQL doesn't support replication

Correct Answer: B

QUESTION 4

Which of the following statements are required to create a key cache of 4 MB, assign the MyISAM table world. City to it and preload the index?

- A. mysql> SET GLOBAL city_cache.key_buffer_size = 4194304;mysql> CACHE INDEX world.City IN city_cache;mysql> LOAD INDEX INTO CACHE world.City;
- B. mysql> ALTER TABLE world.city KEY_CACHE = 4194304;
- C. mysql> CREATE CACHE FOR world.City SIZE = 4194304;
- D. It is not possible to create a key cache for a specific MyISAM table, only the global key cache can be used.

Correct Answer: A

QUESTION 5

Which key buffers are available for MyISAM tables?

- A. A global key buffer that keeps index information for all MyISAM tables.
- B. An optional table-specific key buffer that can be assigned to single MyISAM tables.
- C. An optional column-specific key buffer that can be assigned to a single column of a MyISAM table.

Correct Answer: A
