### QUESTION 1

Which of the following steps are used to create database symbolic links on Windows?

- A. Stop the server.
- B. Restart the server.
- C. Use the ln -s command.
- D. Update your my.ini with the path to the new location.
- E. Move the database directory from the data directory to a new location.
- F. Create a file in the data directory with the database name with an extension of .sym that contains the full path to the new location.

Correct Answer: F

---

### QUESTION 2

Which of the following statements are true?

- A. A MERGE table cannot be used with compressed tables.
- B. A MERGE table may span across compressed and uncompressed tables.
- C. A MERGE table can only be a collection of either compressed or uncompressed tables.

Correct Answer: B

---

### QUESTION 3

Assuming that the user account '\\joe\\'@'example.com' exists, executing DROP USER

'\\joe\\'@'example.com' has the following consequences:

- A. The user account will immediately be removed from the server, if no object-level privileges are in effect for that account
- B. The account will be removed from the server the next time FLUSH PRIVILEGES is executed, if no object-level privileges are in effect for that account
- C. The account and all associated privileges will immediately be removed from the server
- D. The user account and all associated privileges will be removed from the server the next time FLUSH PRIVILEGES is executed.

Correct Answer: C

---

#### QUESTION 4

How can the strict SQL mode provide added security?

- A. By restricting out of range values.
- B. By restricting incorrect data types.
- C. By limiting the operations that the server can perform.
- D. By rejecting actions that do not have values for columns without a default.

Correct Answer: D

---

#### QUESTION 5

Which of the following best describe the general steps involved in normalization?

- A. Change the character set of the tables to normalize.
- B. Remove repeating groups within rows.
- C. Remove duplicate data within columns.

Correct Answer: A
