QUESTION 1

You have configured an IPv6 router that is having problems routing correctly to a default router connected to the Internet. You need to investigate the machine's routing table and check that the default route is in place. You also need to check the neighbor cache to see whether the MAC address of the default router has been learned. Which two commands enable you to perform these tasks? (Choose two.)

- A. netstat -r
- B. arp -n
- C. netstat -m
- D. netstat -p
- E. ifconfig -a

Correct Answer: AD

QUESTION 2

You are asked to recommend a network topology for a new server network. This network will service all of your Sun servers (approximately 50 machines) and several employee workstations (approximately 20 machines). Which network topology is suited for this environment?

- A. a ring topology using intelligent hubs
- B. a VLAN topology with one VLAN for servers and another for workstations
- C. a star topology with one segment for servers and another for workstations
- D. a bus topology segmented into multiple network

Correct Answer: B

QUESTION 3

Solaris IP Filter provides facilities for both filtering network packets as well as performing Network Address Translation (NAT) on network packets. The packets make it through all the filtering steps.

Place the steps in order to create the path a network packet takes through a Solaris 10 OS system acting as a routing firewall and using Solaris IP Filter and NAT.

Note: Some steps are used more than once.

Select and Place:

Solaris IP Filter provides facilities for both filtering network packets as well as performing Network Address Translation (NAT) on network packets. The packets make it through all filtering steps. Place the steps in order to create the path a network packet takes through a Solaris 10 OS system acting as a routing firewall and using Solaris IP Filter and NAT.

Note: Some steps are used more than once.

Processing Order	Steps
First	filtering
Second	network interface
Third	address translation
Kernel routing decision	
Fifth	
Sixth	
Seventh	

Done

Correct Answer:

Solaris IP Filter provides facilities for both filtering network packets as well as performing Network Address Translation (NAT) on network packets. The packets make it through all filtering steps. Place the steps in order to create the path a network packet takes through a Solaris 10 OS system acting as a routing firewall and using Solaris IP Filter and NAT.

Note: Some steps are used more than once.

Processing Order	Steps
address translation	filtering
network interface	network interface
filtering	address translation
Kernel routing decision	
filtering	
network interface	
address translation	

Done

QUESTION 4

A network administrator configured an NTP server and an NTP client, but the client is refusing to synchronize with the server. The client and server clocks have drifted too much for the xntpd daemon to align them and for the NTP protocol to synchronize them. Which two tools will synchronize the two systems? (Choose two.)

- A. rdate
- B. ntptrace
- C. zdate
- D. ntpdate
- E. syncdate

Correct Answer: AD

QUESTION 5

A Solaris system is configured with an IPv6 IPMP group named panic that contains two physical hme interfaces. A third

interface, qfe0, is to be added to this same group on the next system reboot. Which entry needs to be added to the /etc/hostname6.qfe0 file?

- A. group panic addif site-local -deprecated up
- B. deprecated inet6 group panic -failover up
- C. site-local group panic addif qfe0 -failover up
- D. failover group panic up

Correct Answer: D
