QUESTION 1

A user needs to be able to mount the file system located on a USB memory stick on a workstation. How can you allow the user to mount and unmount this file system when required?

A. Give the user write access to /etc/vfstab.

B. Give the user write access to /etc/mnttab.

C. Assign the user the sys_mount privilege for the file system.

D. Enable and configure the automount daemon (automountd).

E. Enable and configure the volume management daemon (vold).

Correct Answer: E

QUESTION 2

To harden a newly installed Solaris OS, an administrator is required to make sure that syslogd is configured to NOT accept messages from the network. Which supported method can be used to configure syslogd like this?

A. Run svcadm disable -t svc:/network/system-log.

B. Edit /etc/default/syslogd to set LOG_FROM_REMOTE=NO.

C. Edit /etc/rc2.d/S74syslog to start syslogd with the -t option.

D. Edit /lib/svc/method/system-log to set LOG_FROM_REMOTE=NO.

Correct Answer: B

QUESTION 3

Click the Exhibit button.

```
# Default definition for  Password management
# Used when service name is not explicitly mentioned
# for password management
#
other password required pam_dhkeys.so.1
other password requisite      pam_authtok_get.so.1
other password requisite      pam_authtok_check.so.1
other password required pam_authtok_store.so.1
```

To implement dictionary checks at password-change time, your company has acquired a PAM module that performs these checks. Which two locations would put this module in the PAM stack when you install this module as an additional strength checking measure? (Choose two.)

A. before the line containing pam_dhkeys.so.1

B. after the line containing pam_authtok_check.so.1

C. after the line containing pam_authtok_store.so.1

D. before the line containing pam_authtok_check.so.1

E. replace the line containing pam_authtok_check.so.1

Correct Answer: BD

QUESTION 4

A web server administrator must configure an Apache 2 web server to start as the user webservd. The web server administrator has been assigned the "Service Operator" rights profile. While attempting to set the SMF service property start/ user, the web server administrator receives the following error message:

$ /usr/sbin/svccfg -s svc:/network/http:apache2 svc:/network/http:apache2> setprop start/user = astring: webservd
Permission Denied.

Why does this error occur?

A. The Apache 2 web server must be started only as root.

B. Only the superuser is permitted to change SMF property values.

C. The administrator needs the solaris.smf.manage authorization.

D. The start/user property does NOT exist for the Apache 2 service.

Correct Answer: C

QUESTION 5

Click the Task button.

There are a number of security tasks that a typical security administrator performs when configuring and deploying new servers.
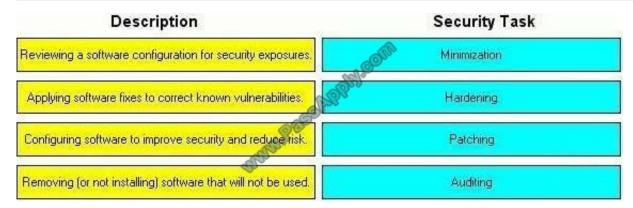

Place the security task next to its description.

Drag and drop question. Drag the items to the proper locations.
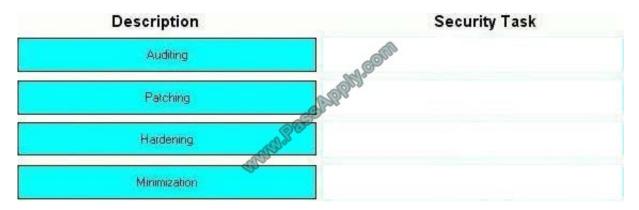

Select and Place:

Description	Security Task
Reviewing a software configuration for security exposures.	Minimization
Applying software fixes to correct known vulnerabilities.	Hardening
Configuring software to improve security and reduce risk.	Patching
Removing (or not installing) software that will not be used.	Auditing

Correct Answer:

Description	Security Task
Auditing	
Patching	
Hardening	
Minimization
