QUESTION 1

What is the maximum number of private interconnects supported in Sun Cluster 3.2?

- A. Six
- B. Four
- C. One
- D. Two

Correct Answer: A

QUESTION 2

In Sun Cluster 3.2, what command is used to view the status of IPMP group members on all nodes?

- A. scstat -IPMP
- B. IPMP status -v
- C. clnode status -m
- D. clrg public -v all

Correct Answer: C

QUESTION 3

The cluster administrator wants to use your cluster for test and production systems in an active mode, with resource groups called test-rg and prod-rg. The cluster administrator's goal is that test-rg and prod-rg will never run on the same

node. Whenever there is only one node left for prod-rg, and test-rg is running on that node, test-rg has to be switched off.

Which command will achieve this behavior?

- A. clrg set -p RG_affinities==test-rg prod-rg
- B. clrg set -p RG_affinities==prod-rg test-rg
- C. clrg set -p RG_affinities==test-rg prod-rg
- D. clrg set -p RG_affinities==prod-rg test-rg

Correct Answer: D

QUESTION 4

A cluster administrator has yet to run a single Solaris Volume Manager command since they installed Solaris. Now the administrator has configured the cluster framework and intends to use Solaris Volume Manager for the shared storage.

What is the very first Solaris Volume Manager task that they must do?

- A. Create diskset mediators.
- B. Manually add metadb replicas on shared storage disks.
- C. Create empty disksets by specifying the names of nodes connected to the shared storage.
- D. Manually add local metadb replicas on local disks of each node connected to the shared storage.

Correct Answer: D

QUESTION 5

Which two can be performed when using Solaris 10 zones? (Choose two.)

- A. Run the complete cluster framework in non-global zones.
- B. Configure a highly available nfs server only in a non-global zone
- C. Install an application that can fail over between non-global zones.
- D. Install an application that can fail over between the global zones and the non-global zones.

Correct Answer: CD
