100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by Oracle Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

An application has failed to stop cleanly and the resource associated with it has been left in a STOP\_FAILED state on node1.

What should the cluster administrator do after ensuring that the application is down?

- A. `clrs clear resourcename`
- B. `clrs disable resourcename clrs enable resourcename` C. `clrs clear -n node1 -f STOP_FAILED resourcename`
- D. `clrs export -o /var/tmp/resourceconfig.xml resourcename clrs delete resourcename clrs create -i /var/tmp/resourceconfig.xml resourcename`

Correct Answer: C

---

### QUESTION 2

When designing the hardware for a multi-node cluster, you should care about the hardware redundancies of each node. Some of the possible hardware redundancies are absolutely required, and some are recommended.

Which hardware redundancy is recommended but NOT required?

- A. mirrored boot disks
- B. redundant transports
- C. redundant server nodes
- D. multiple paths from each connected node assuming a hardware RAID for shared storage

Correct Answer: A

---

### QUESTION 3

You want to create a role that contains only the authorizations `Solaris.cluster.modify` and `Solaris.cluster.admin`. As you then decide which users should be able to successfully access every cluster command, you can just assign these users to the role and give them the role password. These users will never need to have the root password, but they will be able to execute every cluster command.

Which two statements are true? (Choose two.)

- A. This scheme will work for both cluster commands and Sun Cluster Manager.
- B. There are still some cluster-related activities, such as modifying the `/etc/vfstab` file, that the user might NOT be able to do.
- C. The users who switch to the role will still NOT have `Solaris.cluster.read` authorization, so they will not be able to view cluster status and configuration.
- D. This scheme will work as the users try to access command line commands, but it will NOT work if the users execute

operations through Sun Cluster Manager.

Correct Answer: AB

---

#### QUESTION 4

Suppose you have a resource apache-rs and you were informed that its state is in STOP\_FAILED on node1. Which command is needed prior to starting this resource again?

- A. clrs set -n node1 -f STOP\_FAILED apache-rs
- B. clrs clear -n node1 -f STOP\_FAILED apache-rs
- C. clrs reset -n node1 -f STOP\_FAILED apache-rs
- D. clrs disable -n node1 -f STOP\_FAILED apache-rs

Correct Answer: B

---

#### QUESTION 5

You want to give a non-root user the ability to online, enable, disable, and switch over elements of the cluster, but NOT to modify the configuration. In which two ways can you accomplish this? (Choose two.)

- A. Give that specific user the Solaris.cluster.admin authorization.
- B. Give that user the ability to su to a non-root role that has the Solaris.cluster.admin authorization.
- C. Give that user the ability to su to a non-root role that has the Solaris.cluster.modify authorization.
- D. You do not have to do anything. Every user can accomplish what you want since they will naturally all inherit the Solaris.cluster.read authorization from the Basic Solaris User profile.

Correct Answer: AB
