### QUESTION 1

A java EE application contains a session bean which uses a security role USER. A group called people is defined an LDAP server. Which two define appropriate EJB role responsibilities? (Choose two.)

- A. The deployer defines and configures the LDAP realm.
- B. The system administrator defines and configures the LDAP realm.
- C. The deployer maps the application role USER to the LDAP group people.
- D. The system administrator maps the application role USER to the LDAP group people.

Correct Answer: BC

### QUESTION 2

Which API must an EJB 3.1 container make available to enterprise beans at runtime? (Choose one)

- A. The JXTA 1.1 API
- B. The MIDP 2.0 API
- C. The Java SE 6 JNDI API
- D. The Java SE 5 JDBC API

Correct Answer: CD

### QUESTION 3

You are writing a client that sends a message to a JMS queue. The client includes the following code snippet:

```
MessageProducer producer = session.createProducer(queue);
MapMessage message = session.createMapMessage();
message.setString("Item", "Computer");
message.setInt("Quantity", 3);
producer.send(message, DeliveryMode.NON_PERSISTENT, 3, 10000);
```

- A. The message can be consumed by durable subscriber.
- B. In the first line, the argument to the createProducer method needs to be cast to a Destination.
- C. The message is sent using non-default deliver mode, priority, and expiration time values.
- D. You could add more name-value pairs to the message body of the MapMessage if they were required by your application.

Correct Answer: D

createMapMessage

MapMessage createMapMessage()

throws JMSEException

Creates a MapMessage object. A MapMessage object is used to send a self-defining set of name- value pairs, where names are String objects and values are primitive values in the Java programming language.

Reference: javax.jms, Interface Session

#### QUESTION 4

A developer is writing client code to access a session bean deployed to a server instance. The client can access the session bean under which of these circumstances? (Choose three)

- A. The client is deployed in the same JVM as the session bean and the session bean has a local interface.
- B. The client is deployed in the same JVM as the session bean and the session bean exposes a no- interface view.
- C. The client is deployed in a different JVM from the session bean and the session bean has a local interface.
- D. The client is deployed in a different JVM from the session bean and the session bean has a remote interface.
- E. The client is deployed in a different JVM from the session bean and the session bean has a no- interface implementation.

Correct Answer: ABD

D: If your architecture has a requirement whereby the client application (web application or rich client) has to run on a different JavaVirtual Machine (JVM) from the one that is used to run the session beans in an EJB container, then you need to use the remote interface.

#### QUESTION 5

Given the following code in an EJB session bean:

```
10. @Resource (name="jdbc/employeeDB")
11. private DataSource dataSource;
12.
13. public void lookupEmployee(String id) {
14.     InitialContext ic = new InitialContext();
15.     // insert code here
16.     DataSource ds = (DataSource) obj;
17. }
```

Which code, inserted at Line 15, portably looks up the injected resource?

- A. Object obj = ic.lookup ("employeeDB");

B. Object obj = ic.lookup ("dataSource");

C. Object obj = ic.lookup ("jdbc/employeeDB");

D. Object obj = ic.lookup ("java:comp/env/employeeDB");

E. Object obj = ic.lookup ("java:cmp/env/jdbc/employeeDB");

Correct Answer: E
