### QUESTION 1

All of your JSPs need to have a link that permits users to email the web master. This web application is licensed to many small businesses, each of which have a different email address for the web master. You have decided to use a context parameter that you specify in the deployment descriptor, like this:

42.

43.

webmasterEmail

44.

master@example.com

45.

Which JSP code snippet creates this email link?

A. [contact us](#)

C. [contact us](#)

Correct Answer: D

---

### QUESTION 2

Which EL expression returns true if no session has been established with current client?

A. `${not(pageContext.session)}`

B. `${not(requestScope.session)}`

C. `${requestScope.sessions.this}`

D. `${sessionScope.empty}`

Correct Answer: A

Note:

\*

A session is never null. The session is always present in JSP EL, unless you add

\*

If you'd like to check if the session is new or has already been created, use `HttpSession#isNew()` instead.

You've already visited this site before.

You've just started the session with this request!

---

### QUESTION 3

Which of following annotations can be used in a servlet class?

- (i)  
`@javax.annotation.Resource`
  - (ii)  
`@javax.annotation.PreDestroy`
  - (iii) `@javax.annotation.security.RunAs`
  - (iv)  
`@javax.annotation.security.RolesAllowed`
  - (v)  
`@javax.servlet.annotation.WebServlet`
- A.  
(v) only
- B.  
(i) and (v)
- C.  
(i), (ii), (iii) and (v)
- D.  
(i), (ii), (iv) and (v)
- E.  
(i), (ii), (iii), (iv) and (v)

Correct Answer: B

\*

(i) The `javax.annotation.Resource` annotation is used to declare a reference to a resource. `@Resource` can decorate a class, a field, or a method.

\*

(v) `javax.servlet.annotation.AnnotationType.WebServlet`

Annotation used to declare a servlet.

This annotation is processed by the container at deployment time, and the corresponding servlet made available at the specified URL patterns.

Incorrect:

\* Not (II) : `javax.annotation.PreDestroy` Target: Method

---

#### QUESTION 4

Given the java code snippet in `contextInitialized` method of a `ServletContextListener`:

```
ServletRegistration.Dynamic sr = (ServletRegistration.Dynamic)sc.addServlet ("myServlet", myServletClass);  
sr.addMapping("/abc");  
sr.setServletSecurityElement(servletSecurityElement); sr.addMapping("/def");
```

Which statement is true?

- A. `"/abc"` is mapped to `"myservlet"`. The `servletSecurityElement` applies to both `"/abc"` and `"/def"`.
- B. Both `"/abc"` and `"/def"` are mapped to `"myservlet"`. The `servletSecurityElement` applies to `"/abc"`.
- C. Both `"/abc"` and `"/def"` are mapped to `"myservlet"`. The `servletSecurityElement` applies to `"/def"`.
- D. Both `"/abc"` and `"/def"` are mapped to `"myservlet"`. The `servletSecurityElement` applies to both `"/abc"` and `"/def"`.
- E. Both `"/abc"` and `"/def"` are mapped to `"myservlet"`. The `servletSecurityElement` applies to `"/abc"`, but the behavior for `"/def"` is not specified.

Correct Answer: E

Note:

\* `addMapping`

`public void addMapping(java.lang.String namespace,`

`java.lang.String name,`

`java.lang.Class clazz)`

Defines a direct mapping from a namespace and name to a java class (and vice versa)

---

### QUESTION 5

As a convenience feature, your web pages include an Ajax request every five minutes to a special servlet that monitors the age of the user's session. The client-side JavaScript that handles the Ajax callback displays a message on the screen as the session ages. The Ajax call does NOT pass any cookies, but it passes the session ID in a request parameter called sessionID. In addition, assume that your webapp keeps a hasmap of session objects by the ID. Here is a partial implementation of this servlet:

10.

```
public class SessionAgeServlet extends HttpServlet {
```

11.

```
public void service(HttpServletRequest request, HttpServletResponse response) throws IOException {
```

12.

```
String sessionID = request.getParameter("sessionID");
```

13.

```
HttpSession session = getSession(sessionID);
```

14.

```
long age = // your code here
```

15.

```
response.getWriter().print(age);
```

16.

```
}
```

```
... // more code here
```

47. }

Which code snippet on line 14, will determine the age of the session?

- A. session.getMaxInactiveInterval();
- B. session.getLastAccessed().getTime() session.getCreationTime().getTime();
- C. session.getLastAccessedTime().getTime() session.getCreationTime().getTime();
- D. session.getLastAccessed() - session.getCreationTime();
- E. session.getMaxInactiveInterval() session.getCreationTime();
- F. session.getLastAccessedTime() session.getCreationTime();

Correct Answer: F
