QUESTION 1

Which piece of information does vSphere DRS consider when making decisions about which host to place a virtual machine?

- A. Network bandwidth on the host
- B. Disk usage by the virtual machine
- C. Storage bandwidth on the host
- D. Network usage by the virtual machine

Correct Answer: A

QUESTION 2

A vSphere administrator is unable to remove an ESXi host from a vSphere Distributed Switch (VDS). Which two reasons could have caused this issue?

- A. The VDS is configured with ingress traffic shaping.
- B. Virtual machines network adapters on the host are connected to the switch
- C. Virtual machine network adapters are faulty.
- D. The ESXi host is connected to another VDS.
- E. The ESXi host had VMkernel adapters assigned to the switch.

Correct Answer: BD

QUESTION 3

Which vSphere component provides continuous availability for mission-critical virtual machines so users experience no loss of data and no interruption in service during a host failure?

- A. vSphere Fault Tolerance
- B. vSphere Replication
- C. vSphere HA
- D. vSphere vmotion

Correct Answer: A

QUESTION 4

An administrator has noticed an increase in network latency when powered-off virtual machines are migrated.

Which VMkernel adapter can the administrator use to reduce this latency?

- A. vSAN
- B. vSphere Replication
- C. Provisioning
- D. vMotion

Correct Answer: D

QUESTION 5

A vSphere cluster running a virtual machine with VMware HA and DRS enabled in fully automated mode is experiencing a catastrophic host failure.

Which action can the administrator expect DRS to take?

- A. It will move the VM to a host on a different cluster with enough resources after the HA restart.
- B. It will pro-actively move the virtual machine to a different host.
- C. It will move the VM to a host in the same cluster with enough resources after the HA restart.
- D. It will pro-actively move the virtual machine to a different cluster.

Correct Answer: C
